Structures and Properties of Interfaces in Materials: Volume 238 William A. T. Clark, Ulrich Dahmen, Clyde L. Briant, 1992-04-03 The MRS Symposium Proceeding series is an internationally recognised reference suitable for researchers and practitioners

Interfaces Crystallization Viscoelasticity, 2003-07-01 Epoxy resins are regarded as thermosetting resins and have found various commercial applications after crosslinking with adequate curing agents. However, some epoxy resins have been used as thermoplastic resins without curing agents. Figure 1 shows the applications of epoxy resins that are classified into three categories: thermosets in combination with curing agents, thermoplastics without curing agents, and raw materials for modification. The use in thermoplastics is not popular compared with the two other applications. Typical thermoplastic applications are found in stabilizers for vinyl resins, toners for copying machines, retardants for engineering plastics, and sizing material for glass or carbon fibers. The epoxy resin most frequently used is the oligomer of the diglycidyl ether of bisphenol A (DGEBA) whose chemical structure is shown below. The DGEBA is composed of linear molecules with different molecular weights according to the variation of the repeated number n in the structural formula.

Fracture Mechanics Fazil Erdogan, 1995 Structural Interfaces and Attachments in Biology Stavros Thomopoulos, Victor Birman, Guy M. Genin, 2012-10-05 Attachment of dissimilar materials in engineering and surgical practice is a perennial challenge. Bimaterial attachment sites are common locations for injury, repeated injury and mechanical failure. Nature presents several highly effective solutions to the challenge of bimaterial attachment that differ from those found in engineering practice. Structural Interfaces and Attachments in Biology describes the attachment of dissimilar materials from multiple perspectives. The text will simultaneously elucidate natural bimaterial attachments and outline engineering principles underlying successful attachments to the communities of tissue engineers and surgeons. Included is an in depth analysis of the biology of attachments in the body and mechanisms by which robust attachments are formed, a review of current concepts of attaching dissimilar materials in surgical practice and a discussion of bioengineering approaches that are currently being developed.
