

The diagram is a complex flowchart titled 'McAuto/IST Data Flow Diagram'. It illustrates the process of structured systems analysis, starting from 'Requirements for analysis' and 'Requirements for design' at the top, leading through 'Analysis' and 'Design' phases, and finally to 'Implementation' and 'Maintenance'. The flowchart includes various boxes representing different stages and tasks, connected by lines indicating the sequence of the process. Key stages include 'Requirements for analysis', 'Requirements for design', 'Analysis', 'Design', 'Implementation', and 'Maintenance'. The flowchart is organized into a grid-like structure with horizontal and vertical lines connecting the boxes.

VHDL for Simulation, Synthesis and Formal Proofs of Hardware Jean Mermet, 2012-12-06 The success of VHDL since it has been balloted in 1987 as an IEEE standard may look incomprehensible to the large population of hardware designers who had never heard of Hardware Description Languages before for at least 90% of them as well as to the few hundreds of specialists who had been working on these languages for a long time 25 years for some of them Until 1988 only a very small subset of designers in a few large companies were used to describe their designs using a proprietary HDL or sometimes a HDL inherited from a University when some software environment happened to be developed around it allowing usability by third parties A number of benefits were definitely recognized to this practice such as functional verification of a specification through simulation first performance evaluation of a tentative design and sometimes automatic microprogram generation or even automatic high level synthesis As there was apparently no market for HDL s the ECAD vendors did not care about them start up companies were seldom able to survive in this area and large users of proprietary tools were spending more and more people and money just to maintain their internal system
