Structures And Categories For The Representation Of Meaning:

Structures and Categories for the Representation of Meaning Timothy C. Potts, 2007-09-24 This book develops a way of representing the meanings of linguistic expressions independent of any particular language allowing them to be manipulated in accordance with rules related to their meanings that could be implemented on a computer Beginning with a survey of the contributions of linguistics logic and computer science to the representation problem it presents a system of graphs organized by scope relations in which linguistic constituents are sub graphs whose configuration is determined by their categories

The Meaning of Dwelling Features. Conceptual and Methodological Issues H. Coolen, 2008-12-15 Relates the research areas of housing preferences and the meaning of a dwelling with each other and with aspects of the means end approach as applied in marketing research This study presents the model that relates preferences for the features of a dwelling to the meaning they have for people

Logical Structures for Representation of Knowledge and Uncertainty Ellen Hisdal, 2013-04-17 It is the business of science not to create laws but to discover them We do not originate the constitution of our own minds greatly as it may be in our power to modify their character And as the laws of the human intellect do not depend upon our will so the forms of science of 1 1 which they constitute the basis are in all essential regards independent of individual choice George Boole 10 p llj 1 1 Comparison with Traditional Logic The logic of this book is a probability logic built on top of a yes no or 2 valued logic It is divided into two parts part I BP Logic and part II M Logic BP stands for Bayes Postulate This postulate says that in the absence of knowl edge concerning a probability distribution over a universe or space one should assume 1 a uniform distribution 2 The M logic of part II does not make use of Bayes postulate or of any other postulates or axioms It relies exclusively on purely deductive reasoning following from the definition of probabilities The M logic goes an important step further than the BP logic in that it can distinguish between certain types of information supply sentences which have the same representation in the BP logic as well as in traditional first order logic although they clearly have different meanings see example 6 1 2 also comments to the Paris Rome problem of eqs 1 8 1 9 below

The Oxford Handbook of Event Structure Robert Truswell, 2019-03-26 This handbook deals with research into the nature of events and how we use language to describe events The study of event structure over the past 60 years has been one of the most successful areas of lexical semantics uniting insights from morphology and syntax lexical and compositional semantics cognitive science and artificial intelligence to develop insightful theories of events and event descriptions This volume provides accessible introductions to major topics and ongoing debates in event structure research exploring what events are how we perceive them how we reason with them and the role they play in the organization of grammar and discourse The chapters are divided into four parts the first covers metaphysical issues related to events the second is concerned with the relationship between event structure and grammar the third is a series of crosslinguistic case studies and the fourth deals with links to cognitive science and artificial intelligence more broadly The book is strongly

interdisciplinary in nature with insights from linguistics philosophy psychology cognitive science and computer science and will appeal to a wide range of researchers and students from advanced undergraduate level upwards

Connectionist Approaches To Clinical Problems in Speech and Language Raymond G. Daniloff,2001-08-01 Connectionist accounts of language acquisition processing and dissolution proliferate despite attacks from some linguists cognitive scientists and engineers Although the networks of exquisitely interconnected perceptrons postulated by PDP theorists may not be anatomically homologous with actual brain anatomy a growing body of research suggests that the posited network functions can support many human behaviors This volume brings together contributors with a variety of backgrounds and perspectives to explore for the first time the clinical implications of whole language connectionist models Demonstrating that these models are powerful and have explained many phenomena of language acquisition language therapy and speech processing especially at the engineering level they focus specifically on applications of connectionist theory to delayed language aphasia phonological acquisition and speech perception Connectionist models they conclude offer a new interpretive framework for the discussion of information processing in humans and other animals that will be of great utility to all those who study language and seek to intervene in language disorders

Classification, Data Analysis, and Knowledge Organization Hans-Hermann Bock,Peter Ihm,2012-12-06 In science industry public administration and documentation centers large amounts of data and information are collected which must be analyzed ordered visualized classified and stored efficiently in order to be useful for practical applications This volume contains 50 selected theoretical and applied papers presenting a wealth of new and innovative ideas methods models and systems which can be used for this purpose It combines papers and strategies from two main streams of research in an interdisciplinary dynamic and exciting way On the one hand mathematical and statistical methods are described which allow a quantitative analysis of data provide strategies for classifying objects or making exploratory searches for interesting structures and give ways to make comprehensive graphical displays of large arrays of data On the other hand papers related to information sciences informatics and data bank systems provide powerful tools for representing modelling storing and retrieving facts data and knowledge characterized by qualitative descriptors semantic relations or linguistic concepts The integration of both

fields and a special part on applied problems from biology medicine archeology industry and administration assure that this volume will be informative and useful for theory and practice **Mathematical Reviews** ,1997 Orthography, Phonology, Morphology and Meaning R. Frost, Marian Katz, 1992-10-20 The area of research on printed word recognition has been one of the most active in the field of experimental psychology for well over a decade However notwithstanding the energetic research effort and despite the fact that there are many points of consensus major controversies still exist This volume is particularly concerned with the putative relationship between language and reading It explores the ways by which orthography phonology morphology and meaning are interrelated in the reading process Included are theoretical discussions as well as reviews of experimental evidence by leading researchers in the area of experimental reading studies The book takes as its primary issue the question of the degree to which basic processes in reading reflect the structural characteristics of language such as phonology and morphology It discusses how those characteristics can shape a language s orthography and affect the process of reading from word recognition to comprehension Contributed by specialists the broad ranging mix of articles and papers not only gives a picture of current theory and data but a view of the directions in which this research area is vigorously moving **Language Acquisition and the Functional Category System** Peter Jordens, 2012-12-06 Research on spontaneous language acquisition both in children learning their mother tongue and in adults learning a second language has shown that language development proceeds in a stagewise manner Learner utterances are accounted for in terms of so called learner languages Learner languages of both children and adults are language systems that are initially rather simple The present monograph shows how these learner languages develop both in child L1 and in adult L2 Dutch At the initial stage of both L1 and L2 Dutch learner systems are lexical systems This means that utterance structure is determined by the lexical projection of a predicate argument structure while the functional properties of the target language are absent At some point in acquisition this lexical semantic system develops into a target like system With this target like system learners have reached a stage at which their language system has the morpho syntactic features to express the functional properties of finiteness and topicality Evidence of this is word order variation and the use of linguistic elements such as auxiliaries tense and agreement markers and determiners Looking at this process of language acquisition from a functional point of view the author focuses on questions such as the following What is the driving force behind the process that causes learners to give up a simple lexical semantic system in favour of a functional pragmatic one What is the added value of linguistic features such as the morpho syntactic properties of inflection word order variation and definiteness
