Structures For Architects:

Structures for Architects Bryan J.B. Gauld, 2014-09-19 Demand from building control officials for structural calculations even for very simple projects means that today's architects must have a thorough understanding of everyday structural concepts. *Structures for Architects* satisfies the need for a basic introduction to the structural problems encountered by the architect, surveyor and builder. This third edition reflects advances in recent techniques and refers to current Building Regulations and Codes of Practice. Students of architecture, building and surveying at degree, diploma or professional RIBA, RICS, CIOB examination level will find this book a valuable course text. Professionals in these fields who must perform structural calculations to satisfy building control authorities will also find it a useful handbook.

Structure for Architects Ramsey Dabby, Ashwani Bedi, 2012-04-17 An introduction to the concepts and principles of architectural structures in an easy to read format. Written as an easy to understand primer on the topic, *Structure for Architects* engages readers through instruction that uses a highly visual format and real world examples to underline the key facets of structural principles that are essential to the design process. Eschewing complicated mathematics and technical jargon, *Structure for Architects* demystifies the subject matter by showing it in the context of everyday situations, giving architects and architectural technologists a clear understanding of how to incorporate structural principles into their designs. Highlights of this book include a rich collection of drawings, photographs and diagrams spread throughout the text which demonstrate fundamental structural concepts using everyday examples. An overview of structural design basics as well as a summary of structural forms. A look at the design implications of steel reinforced concrete and wood. By providing an overall view of structures that covers the essentials of what architects and architectural technologists need to know, *Structure for Architects* is a valuable tool for illustrating the importance of designing with structure in mind and for learning the basics that are necessary for collaborating confidently with project team members.

Structure for Architects Ashwani Bedi, Ramsey Dabby, 2019-07-11 *Structure for Architects: A Case Study in Steel, Wood and Reinforced Concrete Design* is a sequel to the authors' first text, *Structure for Architects: A Primer*, emphasizing the conceptual understanding of structural design in simple language and terms. This book focuses on structural principles applied to the design of typical structural members: a beam, a girder and a column in a diagrammatic frame building. Through the application of a single Case Study across three key materials, the book illustrates the theory, principles and process of structural design. The Case Study progresses step by step for each material from determining tributary areas and loads through a member's selection and design. The book addresses the frequent disparity between the way architects and engineers perceive and process information, with engineers focusing on technical aspects and architects focusing on visual concepts. *Structure for Architects: A Case Study in Steel, Wood and Reinforced Concrete Design* presents readers with an understanding of fundamental engineering principles through a uniquely thematic Case Study. Focusing on the conceptual understanding of structural design, this book will be of interest to architecture.

students and professionals looking to understand the application of structural principles in relation to steel wood and concrete design **Elementary Structures for Architects and Builders** R. E. Shaeffer, 1998 Provides an introduction to building structures and materials that can be used by either architecture or construction students **Masted Structures in Architecture** James Harris, Kevin Li, 2012-09-10 This is the first fully comprehensive survey and analysis of masted structures and covers examples that have evolved during the past three decades Masted Structures are one of the most interesting developments in post war architecture resulting from a combination of technology structural engineering theory and a collaboration between architects and engineers This is an essential guide for architects to the structural and constructional implications of masted forms in relation to space enclosure patterns of loading and use of differing materials and techniques This useful volume will enable architects and engineers to understand the origins development and nature of masted structures and will provide a stimulating basis for future design **Structures for Architects** Bryan J. B. Gauld, 1988 This manual has been prepared with the object of helping the student architect gain the essentials of basic structures The many worked examples included in the text have been selected to show the types of structural problems the recently qualified architect will meet in the field These examples have been introduced in an effort to reduce the gap between classroom theory and practice schemes marrying good design and planning with structural concepts From the architect's point of view such concepts will require only basic understanding and a knowledge of the rules of thumb as any calculations for structures will require the participation of a structural engineer On the other hand for small projects the calculations should be well within the capabilities of the architect These calculations are required to check the safety of the structure and as such must be clearly presented The reader is encouraged to follow the procedure and lay out used in the worked examples of this book professional examination level should find the book of value *Structures by Design* Rob Whitehead, 2019-07-19 Winner of the 2021 TAA Textbook Excellence Award Honorable Mention of the 2021 BTES Book Award Structures by Design Thinking Making Breaking is a new type of structures textbook for architects who prefer to learn using the hands on creative problem solving techniques typically found in a design studio Instead of presenting structures as abstract concepts defined by formulas and diagrams this book uses a project based approach to demonstrate how a range of efficient effective and expressive architectural solutions can be generated tested and revised Each section of the book is focused on a particular manner by which structural resistance is provided Form Arches and Cables Sections Beams Slabs and Columns Vectors Trusses and Space Frames Surfaces Shells and Plates and Frames Connections and High Rises The design exercises featured in each chapter use the Think Make Break method of reiterative design to develop and evaluate different structural options A variety of structural design tools will be used including the human body physical models historical precedents static diagrams traditional formulae and advanced digital analysis The book can be incorporated into various course curricula and studio exercises because of the flexibility of the format and range of expertise required for these
