Technological Change The Learning Curve And Profitability:

Technological Change, the Learning Curve and Profitability Dudley Jackson, 1998 This accessible book provides a rigorous explanation of the concepts and theory of technological change and learning in production Dudley Jackson offers a thorough integration of theory and data to show how technological change and learning increase profitability The impact of technological change and learning on the rate of profit are comprehensively explained with extensive use of real world plant and industry level statistics Data on the manufacturing industry in the United States is used to explain and exemplify neutral technological change or increased multifactor productivity Non neutral capital using labour saving technological change is then examined using data on the switch from steam to diesel locomotives in the railroad industry. The impact of technological change on unit cost and quality is examined in two case studies automation in the pulp plant of a paper mill and the refining of petroleum to produce gasoline of a higher octane rating The theoretical background to and derivation and use of the learning curve is explained using data on the building of Liberty ships in individual shipyards during the Second World War Finally the time constant progress function is introduced to show how learning increases profitability This book will be of immense interest to students of microeconomics strategic and production management industrial organization and the economics of innovation and technology The Theory of Technological Change and Economic Growth Dr Stanislaw Gomulka, 2006-12-05 In this wide ranging exposition of the various economic theories of technological change Stanislaw Gomulka relates them to rates of growth experienced by different economies in both the short and the long term Analysis of countries as diverse as Japan the Soviet Union and the United Kingdom demonstrates that there is an interdependence between technological change and the institutional and cultural characteristics of different countries which can have a profound effect on their rates of growth All of the major relevant models are discussed including those of Kuznets and Phelps but throughout the emphasis is on the creation of a unified theoretical framework to help explain the impact of technological progress on both a micro and a macro scale Management of Technological Change E.G. Frankel, 2012-12-06 Technological change has been recognized as the major contributor to economic growth and has become one of the most important challenges to policy makers and managers Many excellent books and papers have been written on the subject Most of these deal with the macro or micro economic impact of technological change or the technological change process from invention and discovery to innovation development and final maturity as well as ultimate obsolescence of technology This book is designed to present technological change as a decision process and explain the use of recently developed methods for the effective management of technological change In particular techniques for the effective choice among technological alternatives timing of the introduction of new technology both in terms of its own status and that of the technology to be replaced if any and the rate and method of introduction of new technology are presented Management of technology is a complex decision process which is affected by both internal and external factors. The purpose of this book is to instruct the

reader in effective technology deciSion making which involves the evaluation of the status of technology in use if any the problem to be solved or output to be obtained determination of environmental and internal constraints and the competitive environment or market conditions which affect the technology decisions The Metrics of Science and Technology Eliezer Geisler, 2000-08-30 Dr Geisler's far reaching unique book provides an encyclopedic compilation of the key metrics to measure and evaluate the impact of science and technology on academia industry and government Focusing on such items as economic measures patents peer review and other criteria and supported by an extensive review of the literature Dr Geisler gives a thorough analysis of the strengths and weaknesses inherent in metric design and in the use of the specific metrics he cites His book has already received prepublication attention and will prove especially valuable for academics in technology management engineering and science policy industrial R government science and technology policymakers and scientists and managers in government research and technology institutions Geisler maintains that the application of metrics to evaluate science and technology at all levels illustrates the variety of tools we currently possess Each metric has its own unique strengths and weaknesses but overall metrics offer the best possible way to evaluate science and technology He then finds that in general science and technology have a positive effect on the human experience Truly state of the art in the study of the metrics of science and technology their outcomes and contributions to society and the economy the book provides unique analyses of the academic world and its most useful metrics the industrial science technology research and development complex and the government network of laboratories For each Geisler gives a comprehensive analysis of the main metrics and their best applications His book is thus also usable in certain advanced undergraduate and graduate courses and seminars that treat technology and engineering management project management in technology industries and the evaluation of social and economic programs Technological Change in a Spatial Context Enrico Ciciotti, Neil Alderman, Alfred Thwaites, 2012-12-06 This book represents a selection of contributions to the Regional Science Association European Summer Institute held at Arco Lake of Garda Italy from 17th to 23rd July 1988 on the theme of Theories and policies of technological development at the local level As such it forms a complementary volume to the collection of invited papers entitled The Spatial Context of Technological Development edited by Professors Riccardo Cappellin and Peter Nijk amp and published by Avebury Gower The Summer Institute covered a broad range of themes and contributions from over 100 researchers It has therefore not been our intention to represent or replicate these themes directly but to provide as wide an international coverage of current research in regional science in the field of technological change as possible The papers to be found in this book are drawn from the European Community Eastern Europe Scandinavia North America and elsewhere Inevitably as the book was to be published in English most of the editorial work has been undertaken at the Centre for Urban and Regional Development Studies at Newcastle University In so doing we have attempted to standardize the English as far as possible whilst trying not to lose the characteristics of the styles of the individual authors **Technical Change and**

Industrial Transformation Giovanni Dosi,1984-08-16 **International Bibliography of Economics 1998** Compiled by the British Library of Political and Economic Science, 1999-12-16 Renowned for its international coverage and rigorous selection procedures this series provides the most comprehensive and scholarly bibliographic service available in the social sciences Arranged by topic and indexed by author subject and place name each bibliography lists and annotates the most important works published in its field during the year of 1997 including hard to locate journal articles Each volume also includes a complete list of the periodicals consulted Journal of Economic Literature ,1999 **Principles of** Microeconomics: A New-Look Textbook of Microeconomic Theory, 22e Ahuja H.L., This most popular and proven text takes a further lead with this revision by aligning its contents with the prescribed UGC model curriculum and new Choice Based Credit System CBCS syllabus The book provides carefully tailored content for undergraduate courses in economics across a range of academic disciplines Behavioral Norms, Technological Progress, and Economic Dynamics Ernst Helmstädter, Mark Perlman, 1996 Schumpeter was interested in dynamic economics rather than the economics of stagnation in the economics of the creation of wealth rather than the economics of the redistribution of wealth in the economics of technological innovation rather than the economics of industrial management The major thrust of the volume then concerns studies of industrial change with emphasis both on analysis of the impact of innovation and on the interrelatedness of industries viewed through the process of innovation
