Technology And Security In The 21st Century A Demand Side Perspective:

Technology and Security in the 21st Century Amitav Mallik, 2004 The immense impact of technology on both warfare and security has been clearly demonstrated and has heightened concerns relating to the proliferation of military technology and misuse by irresponsible actors Technology control regimes are a vital component of national security strategies This report presents evidence of the increasing relevance of technology in the 21st century and a brief review of the control regimes as well as the perspectives of progressive developing nations It highlights the need for a new approach to the management of technology and security issues Meeting future challenges to arms control and non proliferation will require wider cooperation among nations in a rapidly changing and interdependent world in which some of the new technologies will further accentuate security sensitivities The report advocates the abandonment of cold war mindsets and makes a case for a broader cooperative approach to the management of technology controls International cooperation will be vital for achieving the objectives of non proliferation disarmament and global socio economic progress and will facilitate steps towards the elimination of weapons of mass destruction and the dangers posed by terrorism thereby fostering enhanced international peace and stability

Technology and Security in the 21st Century Amitav Mallik, 2004 The Nordic Countries and the European Security and Defence Policy Alyson J. K. Bailes, Gunilla Herolf, Bengt Sundelius, 2006 In 1999 the EU decided to develop its own military capacities for crisis management This book brings together a group of experts to examine the consequences of this decision on Nordic policy establishments as well as to shed new light on the defence and security issues that matter for Europe as a whole

21st Century Prometheus Maurizio Martellini, Ralf Trapp, 2020-03-11 This book describes the evolving CBRN risk landscape and highlights advances in the core CBRN technologies including when combined with improvised explosive devices CBRN threats It analyses how associated technologies create new safety and security risks challenging certain assumptions that underlie current control regimes The book also shows how technologies can be enablers for more effective strategies to mitigate these risks 21st century safety and security risks emanating from chemical biological radiological and nuclear materials whether resulting from natural events accidents or malevolent use are increasingly shaped by technologies that enable their development production or use in ways that differ from the past Artificial intelligence the use of cyberspace the revolution in the life sciences new manufacturing methods new platforms and equipment for agent delivery hypersonic weapons systems information tools utilised in hybrid warfare these and other technologies are reshaping the global security environment and CBRN landscape They are leading to a growing potential for highly targeted violence and they can lead to greater instability and vulnerability worldwide At the same time technology offers solutions to manage CBRN risks Examples are faster detection more accurate characterisation of the nature and origin of CBRN agents new forensic investigation methods or new medical treatments for victims of CBRN incidents New educational concepts help to foster a culture of responsibility in science and technology and strengthen governance New

training methods help develop practical skills to manage CBRN risks more effectively The book concludes that there is a growing need for a holistic framework towards CBRN risk mitigation Traditional arms control mechanisms such as global regional or bilateral treaties and export controls are still needed as they provide a necessary legal and institutional framework But laws and technology denial alone will not suffice and institutional mechanisms can at times be weak Given the pace of technological progress and the diffusion of critical knowledge tools and materials policymakers must accept that CBRN risks cannot be eliminated altogether Instead society has to learn to manage these risks and develop resilience against them This requires a softer broadly based multi stakeholder approach involving governments industry the research and development communities educators and civil society Furthermore educating policymakers that cutting edge technologies may seriously affect global strategic stability could create incentives for developing a more creative and contemporary arms control strategy that fosters cooperation rather than incremental polarisation

Trading with the Enemy Hugo Meijer, 2016-02-02 In light of the intertwining logics of military competition and economic interdependence at play in US China relations Trading with the Enemy examines how the United States has balanced its potentially conflicting national security and economic interests in its relationship with the People s Republic of China PRC To do so Hugo Meijer investigates a strategically sensitive yet under explored facet of US China relations the making of American export control policy on military related technology transfers to

China since 1979 *Trading with the Enemy* is the first monograph on this dimension of the US China relationship in the post Cold War Based on 199 interviews declassified documents and diplomatic cables leaked by Wikileaks two major findings emerge from this book First the US is no longer able to apply a strategy of military technology containment of China in the same way it did with the Soviet Union during the Cold War This is because of the erosion of its capacity to restrict the transfer of military related technology to the PRC Secondly a growing number of actors in Washington have reassessed the nexus between national security and economic interests at stake in the US China relationship by moving beyond the Cold War trade off between the two in order to maintain American military preeminence vis vis its strategic rivals By focusing on how states manage the heterogeneous and potentially competing security and economic interests at stake in a bilateral relationship this book seeks to shed light on the evolving character of interstate rivalry in a globalized economy where rivals in the military realm are also economically interdependent
