Reinforced Composites Jang-Kyo Kim, Yiu-Wing Mai, 1998-10-21 The study and application of composite materials are a truly interdisciplinary endeavour that has been enriched by contributions from chemistry physics materials science mechanics and manufacturing engineering The understanding of the interface or interphase in composites is the central point of this interdisciplinary effort From the early development of composite materials of various nature the optimization of the interface has been of major importance While there are many reference books available on composite materials few of them deal specifically with the science and mechanics of the interface of fiber reinforced composites Further many recent advances devoted solely to research in composite interfaces have been scattered in a variety of published literature and have yet to be assembled in a readily accessible form To this end this book is an attempt to bring together recent developments in the field both from the materials science and mechanics perspective in a single convenient volume The central theme of the book is tailoring the interface properties to optimise the mechanical performance and structural integrity of composites with enhanced strength stiffness and fracture toughness or specific fracture resistance It deals mainly with interfaces in advanced composites made from high performance fibers such as glass carbon aramid ultra high modulus polyethylene and some inorganic e g B W Al₂O₃ SiC fibers and matrix materials encompassing polymers metals alloys and ceramics The book is intended to provide a comprehensive treatment of composite interfaces in such a way that it should be of interest to materials scientists technologists and practising engineers as well as graduate students and their supervisors in advanced composites We hope that this book will also serve as a valuable source of reference to all those involved in the design and research of composite interfaces The book contains eight chapters of discussions on microstructure property relationships with underlying fundamental mechanics principles In Chapter 1 an introduction is given to the nature and definition of interfaces in fiber reinforced composites Chapter 2 is devoted to the mechanisms of adhesion which are specific to each fiber matrix system and the physio chemical characterization of the interface with regard to the origin of adhesion The experimental techniques that have been developed to assess the fiber matrix interface bond quality on a microscopic scale

are presented in Chapter 3 along with the techniques of measuring interlaminar intralaminar strengths and fracture toughness using bulk composite laminates The applicability and limitations associated with loading geometry and interpretation of test data are compared Chapter 4 presents comprehensive theoretical analyses based on shear lag models of the single fiber composite tests with particular interest being placed on the interface debond process and the nature of the fiber matrix interfacial bonding Chapter 5 is devoted to reviewing current techniques of fiber surface treatments which have been devised to improve the bond strength and the fiber matrix compatibility stability during the manufacturing processes of composites The micro failure mechanisms and their associated theories of fracture toughness of composites are discussed in Chapter 6 The roles of the interface and its effects on the mechanical performance of fiber composites are addressed from several viewpoints Recent research efforts to augment the transverse and interlaminar fracture toughness by means of controlled interfaces are presented in Chapters 7 and 8

Scientific Information Bulletin ,1989 **Scientific and Technical Aerospace Reports** ,1994 *Carbon Fibers and Their Composites* Peter Morgan,2005-05-20 Most literature pertaining to carbon fibers is of a theoretical nature Carbon Fibers and their Composites offers a comprehensive look at the specific manufacturing of carbon fibers and graphite fibers into the growing surge of diverse applications that include flameproof materials protective coatings biomedical and prosthetics applications textiles batteries and fuel cells automotive applications construction and even musical instruments This useful guide provides a hands on approach to the fabrication of carbon fibers The book begins with a blueprint of the international history and development of carbon fiber clearly defined terminology for all forms of solid carbon products and the properties for elemental carbon and its allotropic forms It then elaborates upon precursor materials relevant surface treatment and sizing for each carbon fiber type available in the world market Several chapters also examine the types of matrices their properties and fracture mechanics of thermoset and thermoplastic polymers carbon glass metal and ceramics matrices Carbon Fibers and their Composites reveals straightforward guidelines for the day to day operations of a carbon fiber plant such as safety testing quality control design of equipment packaging air flow dust control maintenance and environmental policies Based on over 30 years of experience in the field the author offers insight and possible solutions to the problems associated with production and testing of carbon fibers and their related composites He details the use of analytical chemistry techniques instrumentation requirements and statistics to evaluate the results Carbon Fibers and their Composites offers an excellent clarification of how carbon fibers yield reinforced composites their physical and chemical characteristics the diverse manufacturing techniques for each type and the advantages they offer to a variety of applications
