Tectonic Controls And Signatures In Sedimentary Successions:

Tectonic Controls and Signatures in Sedimentary Successions Lynne E. Frostick, 2009-04-13 Stratigraphers and sedimentologists who are presently describing and interpreting the infill of sedimentary basins are generally agreed that it is difficult to disentangle the signatures of tectonic processes from those of climate and eustatic sea level change in the resultant rock succession Until better criteria are developed to distinguish between the roles played by the major variables it is still most useful to document and interpret basin fill architectures where we know from independent evidence that one of the main controls is likely to have been a major contributor This book contains a collection of papers describing situations where the tectonic setting is fairly well established and it can be assumed that at least the tectonic factor has contributed to the resultant signatures

Tectonic Controls and Signatures in Sedimentary Successions, 2009 *Regional Geology and Tectonics* Domenico Chiarella, Nicola Scarselli, Jürgen Adam, 2024-04-16 *Regional Geology and Tectonics Volume 2 Phanerozoic Rift Systems and Sedimentary Basins* Second Edition is the second volume in a three volume series covering Phanerozoic regional geology and tectonics Experience in analyzing and assessing rifts locations where the Earth's outer shell and crust have been stretched over time by seismic activity is critical for exploration geologists in identifying Earth's most lucrative hydrocarbon locations in which extraction is both efficient and safe Vast compilations of related industry data present regional seismic lines and cross sections and summaries of analogue and theoretical models are provided as an essential backdrop to the structure and stratigraphy of various geological settings The new edition of *Regional Geology and Tectonics Volume 2 Phanerozoic Rift Systems and Sedimentary Basins* features updated summaries of analogue and theoretical models New to this edition are chapters on deepwater foldbelts and lithospheric extension as well as new case studies on volcanic and passive margin basins Provides a practical reference for petroleum geologists that discusses the importance of rift systems and the structural evolution of the Earth Includes analyses of active rifts in East Africa China Siberia the Gulf of Suez and the Russian Arctic that provide immediately implementable petroleum exploration applications in regions heavily targeted by oil gas companies Presents overviews of sequence stratigraphy in rifts and structural controls on clastic and carbonate sedimentation that are critical to the exact mapping of the most lucrative hydrocarbon locations by exploration geologists

Continental Lithosphere Extension and Breakup Garry D. Karner, Gianreto Manatschal, L. Pinheiro, 2007 This volume summarises our present understanding of the formation of passive continental margins and their ocean continent transitions It outlines the geological geophysical and petrological observations that characterize extensional systems and how such observations can guide and constrain dynamic and kinematic models of continental lithosphere extension breakup and the inception of organized sea floor spreading

Precambrian Basins of India R. Mazumder, P.G. Eriksson, 2015-04-02 This Memoir provides a comprehensive review of the Precambrian basins of the four Archaean nuclei of India Dharwar Bastar

Singhbhum and Aravalli Bundelkhand encompassing descriptions of the time space distribution of sedimentary volcanic successions the interrelationship between tectonics and sedimentation and basin histories Studies of 22 basins within the framework of an international basin classification scheme deepen an understanding of the basin architecture especially for cratonic basins Most Indian sedimentary successions formed as cratonic to extensional margin rift and thermal sag basins some reflecting mantle plume movement subcrustal heating or far field stress This Memoir shows that Phanerozoic plate tectonic and sequence stratigraphic principles can be applied to the Precambrian basins of large Archaean provinces The differences between the stratigraphic architecture of the Indian Precambrian and examples of Phanerozoic basin fill successions elsewhere are ascribed to variable rates and intensities of the controls on accommodation and sediment supply and changes inherent in the evolution of the hydrosphere atmosphere and biosphere systems

Principles of Sequence Stratigraphy Octavian Catuneanu, 2022-07-22 Principles of Sequence Stratigraphy Second Edition presents principles to practical workflow that guide applications in a consistent manner that is independent of model geological setting and the types and resolution of the data available The book explains the points of agreement and difference between the various approaches to sequence stratigraphy while also defining the common ground that affords the standard application of the method This enables the practitioner to avoid nomenclatural and methodological confusions and apply sequence stratigraphy The text is richly illustrated with hundreds of full color diagrams and examples of outcrop borehole and seismic data The book's balanced approach helps students and professionals acquire a sound understanding of the concepts and methodology It will appeal to geologists geophysicists and engineers with interest in basin analysis stratigraphy and sedimentology as well as in all economic applications that concern the exploration and production of natural resources including water hydrocarbons coal and sediment hosted mineral deposits Updates the award winning first edition in all aspects of sequence stratigraphy from the underlying theory to the practical applications Presents the standard approach to sequence stratigraphic methodology nomenclature and classification the role of modeling in sequence stratigraphy and the difference between modeling and methodology Discusses the roles of scale and stratigraphic resolution in sequence stratigraphy and the workflow that affords a consistent application of the method irrespective of the types of data available Describes the three dimensional nature of the stratigraphic architecture and the variability of stratigraphic sequences with the tectonic setting depositional setting and the climatic regime Illustrates all concepts with high quality full color diagrams outcrop photographs and subsurface well data and seismic images

Ancient Supercontinents and the Paleogeography of Earth Lauri J. J Pesonen, Johanna Salminen, Sten-Ake Elming, David A.D. A.D. Evans, Toni Veikkolainen, 2021-10-06 Ancient Supercontinents and the Paleogeography of Earth offers a systematic examination of Precambrian cratons and supercontinents Through detailed maps of drift histories and paleogeography of each continent this book examines topics related to Earth's tectonic evolution prior to Pangea including plate kinematics orogenic development and paleoenvironments

Additionally this book discusses the methodologies used principally paleomagnetism and tectonostratigraphy and addresses geophysical topics of mantle dynamics and geodynamo evolution over billions of years. Structured clearly with consistent coverage for Precambrian cratons, this book combines state of the art paleomagnetic and geochronologic data to reconstruct the paleogeography of the Earth in the context of major climatic events such as global glaciations. It is an ideal up to date reference for geoscientists and geographers looking for answers to questions surrounding the tectonic evolution of Earth. Provides robust paleogeographies of Precambrian cratons based on high quality paleomagnetic and geochronologic data and critically tested by global geological datasets. Includes links to updated databases for the Precambrian such as PALEOMAGIA and the Global Paleomagnetic Database GPMDB. Presents full color maps of the drift histories of each continent as well as their paleogeographies. Discusses key questions regarding continental drift, the supercontinent cycle and the geomagnetic dipole hypothesis and analyzes palaeogeography in the context of Earth's holistic evolution.

Precambrian Sedimentary Environments Wladyslaw Altermann, Patricia Corcoran, 2009-03-05

The motivation for this volume came from the idea that the Precambrian is the key both to the present and to the understanding of the Earth as a whole. The Precambrian constitutes about 85% of Earth's history and of that about 3.75 billion years of Precambrian time represented by rocks are accessible to geoscientists. Ancient atmospheric and environmental conditions can be traced back to the time when the Earth was only about 250 million years old. Precambrian rocks supply almost 75% of important mineral resources such as Fe, Mn, Au, Pt and Cr. Many of these elements are associated with sedimentary rocks and some important hydrocarbon, coal and graphite deposits are also hosted by Precambrian rocks. This volume is aimed at geoscientists interested in Precambrian sedimentary rocks and at students of Earth history. It contains review articles discussing Precambrian conditions and case studies from Precambrian shields and successions of North and South America, Australia, Africa, Europe, Asia and India. The introductory papers written by experts on Precambrian environments treat comprehensively the application of actualism to the Precambrian, the evolution and influence of life on the sedimentary rock record, the genesis of Banded Iron Formations, the Precambrian sulphur cycle and the significance of Precambrian chemical carbonate precipitates. The case studies included depositional settings and processes in Archean terranes, in Paleoproterozoic sequences with some emphasis on the lack of vegetation and weathering and in late Proterozoic sequences with some emphasis on glacial deposits. The contributions demonstrate that Precambrian sedimentary deposits are commonly similar to their Phanerozoic counterparts in terms of composition, sedimentary processes and depositional setting but may differ significantly as a result of lack of vegetation, climatic and biological constraints, composition and circulation of seawater and the secular involvement of continental crust. Contains review articles discussing Precambrian conditions and case studies from Precambrian shields and successions of North and South America, Australia, Africa, Europe, Asia and India.
