It is desirable for a student to understand a worked example before tackling fresh practical problems himself. Chemical engineering problems require a numerical answer, and it is essential to become familiar with the different techniques so that answers are obtained by systematic methods rather than by intuition.

With these aims in mind these two volumes have been prepared which contain the solutions to the problems presented in the third editions of Volumes 1 and 2 respectively of 'Chemical Engineering'. The scope of the books is similar to that of Volumes 1 and 2, and the solutions are grouped in sections corresponding to the chapters in those texts. The books have been written concurrently with the preparation of the third editions (SI) of Volumes 1 and 2, and extensive reference has been made to the equations and sources of data in those volumes at all stages. In this sense Volume 4 is thus complementary to Volume 1 and Volume 5 to Volume 2.
