Hydro-Environmental Analysis James L. Martin, 2013-12-04. Focusing on fundamental principles, *Hydro-Environmental Analysis: Freshwater Environments* presents in-depth information about freshwater environments and how they are influenced by regulation. It provides a holistic approach exploring the factors that impact water quality and quantity and the regulations, policy, and management methods that are necessary to maintain this vital resource. It offers a historical viewpoint as well as an overview and foundation of the physical, chemical, and biological characteristics affecting the management of freshwater environments. The book concentrates on broad and general concepts providing an interdisciplinary foundation. The author covers the methods of measurement and classification, chemical, physical, and biological characteristics, indicators of ecological health, and management and restoration. He also considers common indicators of environmental health, characteristics and operations of regulatory control structures, applicable laws and regulations, and restoration methods. The text delves into rivers and streams in the first half and lakes and reservoirs in the second half. Each section centers on the characteristics of those systems and methods of classification and then moves on to discuss the physical, chemical, and biological characteristics of each. In the section on lakes and reservoirs, it examines the characteristics and operations of regulatory structures and presents the methods commonly used to assess the environmental health or integrity of these water bodies. It also introduces considerations for restoration and presents two unique aquatic environments: wetlands and reservoir tailwaters. Written from an engineering perspective, the book is an ideal introduction to the aquatic and limnological sciences for students of environmental science as well as students of environmental engineering.

It also serves as a reference for engineers and scientists involved in the management regulation or restoration of freshwater environments

Sustainability in Energy and Buildings Robert J. Howlett, Lakhmi C Jain, Shaun H. Lee, 2010-11-29 This volume represents the proceedings of the Second International Conference on Sustainability in Energy and Buildings SEB 10 held in the City of Brighton and Hove in the United Kingdom and organised by KES International. Organised by the KES International organisation, SEB 10 formed a welcome opportunity for researchers in subjects related to sustainability, renewable energy technology and applications in the built environment to mix with other scientists, industrialists and stakeholders in the field. SEB 10 attracted papers on a range of renewable energy and sustainability related topics and in addition the conference explored two innovative themes: The application of intelligent sensing, control, optimisation and modelling techniques to sustainability and The technology of sustainable buildings. These techniques could ultimately be applied to the intelligent building. SEB 10 attracted about 100 submissions from around the world. These were subjected to a two stage blind peer review process. With the objective of producing a high quality conference, the best 30% of these were selected for presentation at the conference and publication in this volume of proceedings. The papers in this volume are grouped into the five themes under which they were presented: Building Sustainability, Sustainable Power Generation, Sustainable Energy Policy and Strategy, Energy Monitoring and Management and Solar Energy Technology. These proceedings form an interesting and informative collection of papers useful as a resource for further research and a valuable source of information for those interested in the subject.
