Models J. Christopher Westland, 2019-04-05 This new edition surveys the full range of available structural equation modeling
SEM methodologies The book has been updated throughout to reflect the arrival of new software packages which have made
analysis much easier than in the past Applications in a broad range of disciplines are discussed particularly in the social
sciences where many key concepts are not directly observable This book presents SEM s development in its proper historical
context essential to understanding the application strengths and weaknesses of each particular method This book also
surveys the emerging path and network approaches that complement and enhance SEM and that are growing in importance
SEM s ability to accommodate unobservable theory constructs through latent variables is of significant importance to social
scientists Latent variable theory and application are comprehensively explained and methods are presented for extending
their power including guidelines for data preparation sample size calculation and the special treatment of Likert scale data
Tables of software methodologies and fit statistics provide a concise reference for any research program helping assure that
its conclusions are defensible and publishable Causal Models in the Social Sciences Hubert M. Blalock, 1985 Causal
models are formal theories stating the relationships between precisely defined variables and have become an indispensable
tool of the social scientist This book draws upon the best writing in a variety of fields to provide a comprehensive picture of
contemporary work on this subject This collection of articles stands alone as a course book on the causal modeling approach
to theory construction and data analysis There is a growing literature on causal models and structural systems of equations
that crosscuts a number of different fields However much of this material remains widely scattered throughout the journal
literature and varies considerably in terms of both level of difficulty and substantive application This classic text by Blalock

addresses and resolves this concern The most systematic discussions of this general approach have appeared in the econometrics literature where several general texts are available However many of these discussions are too technical for most sociologists political scientists scholars and researchers who lack a strong background in mathematics This book attempts to integrate a few of the less technical papers written by econometricians such as Koopmans Wold Strotz and Fisher with discussions of causal approaches in the biological sciences and with relatively more exploratory treatments by sociologists and other social scientists
