Structural Traps V:

Structural Traps V, 1991 **Sedimentary Basins and Petroleum Geology of the Middle East** A.E.M. Nairn, A.S. Alsharhan, 1997-12-11 The wealth of petroleum has made the Middle East one of the most actively explored regions of the world The volume of geological geophysical and geochemical data collected by the petroleum industry in recent decades is enormous The Middle East may be a unique region in the world where the volume of subsurface data and information exceeds that based on surface outcrop This book reviews the tectonic and geological history of the Middle East and the regional hydrocarbon potential on a country by country basis in the context of current ideas developed through seismic and sequence stratigraphy and incorporating the ideas of global sea level change Subsurface data have been used as much as possible to amplify the descriptions The paleogeographic approach provides a means to view the area as a whole While the country by country approach inevitably leads to some repetition it enhances the value of the volume as a teaching tool and underlines some of the changing lithologies within formations carrying the same name **Giant Hydrocarbon Reservoirs of The World** Paul Mitchell Harris, L. James Weber, 2006 Reservoirs described in this volume are located in the Middle East Asia West Africa North and South America The authors explore historical and alternative approaches to reservoir description characterization and management as well as examining appropriate levels and timing of data gathering technology applications evaluation techniques and management practices in various stages in the life of individual development projects The giant fields discussed address issues important to reservoir description characterization and management from both geologic engineering perspectives **Faults, Fluid Flow, and Petroleum Traps** Rasoul B. Sorkhabi, Yoshihiro Tsuji, 2005

Applied Hydrodynamics in Petroleum Exploration E. C. Dahlberg, 2013-11-11 It has for some time been the author's opinion that the need exists for a complete self contained volume on hydrodynamics addressed to and written in an idiom for geologists and geophysicists actively engaged in the search for hydrocarbons This book is offered as my attempt to satisfy this need Explorationists traditionally concern themselves with four basic aspects of oil and gas occurrence since these constitute the necessary conditions enhancing the likelihood of subsurface hydrocarbon accumulations They are Trap Reservoir Source and the Fluids themselves Historically great attention has been paid to traps and reservoirs and much pertinent literature on structure stratigraphy and lithology is available With respect to sources an increasing body of literature is becoming available in the form of articles books and research reports in the areas of geochemistry and mineralogy It is to the largely ignored fourth aspect the fluids that this book is directed In its formulation I have drawn from numerous sources college physics texts hydrodynamics is one of the most difficult subjects in physics personal notes from a rigorous two week course presented by M K Hubbert who literally fathered the discipline journal articles some strong and others weak in their treatment of the subject discussions with experienced exploration geologists some of whom have successfully utilized these procedures and others who were not so sure and experience gained as well as mistakes made in

the course of my own personal oil and gas exploration activities **Hydrocarbon Seal Quantification** A.G. Koestler, R. Hunsdale, 2002-04-29 This volume contains 17 selected papers reflecting the flavour of the Norwegian Petroleum Society conference on hydrocarbon seals quantification and showing the recent significant advances in the understanding and application of hydrocarbon seal methodologies Three broad categories are covered in this book methodologies addressing cap rock integrity methodologies relating to fault seal and case studies both from the hydrocarbon basins of Northwestern Europe and in the form of outcrop examples With the North Sea Norwegian Sea and Atlantic Margin moving along their respective basin maturity and development curves exploration is being forced deeper into high pressure high temperature terrains while exploitation and development requires greater precision and realism in reservoir simulations to maximise drilling strategies to prolong field life In all instances the need for predictive tools and methodologies that address the integrity and behaviour of top and lateral fault seals to hydrocarbon traps both in the static and dynamic state have been identified as key risk factors and this is reflected in this volume *Geology of Michigan* John Adam Dorr, Donald F.

Eschman, 1970 Studies the land and waters of Michigan **Geophysics, the Leading Edge of Exploration**, 1992-07

Giant Oil and Gas Fields of the Decade, 1990-1999 Michel Thomas Halbouty, 2003 Accompanying CD ROM contains a table of 877 giant fields and statistical and geologic information on sedimentary province settings of giant fields Page 4 of cover *Geodynamics of a Cordilleran Orogenic System: The Central Andes of Argentina and Northern Chile* Peter G.

DeCelles, Mihai N. Ducea, Barbara Carrapa, Paul A. Kapp, 2015-01-01 This memoir brings together results from a multidisciplinary study of the processes that have formed the highest widest part of the Andean Cordilleran orogenic belt in northern Argentina and Chile The region features a tectonically erosive forearc protracted arc magmatism a high elevation hinterland plateau and strongly shortened retroarc thrust belt and a Paleocene Recent foreland basin system
