Bouchez, D. Hutton, W.E. Stephens, 2013-11-11 viii debate of those earlier days has been beautifully summarized by H H Read in his famous Granite Controversy 1957 Read's formulation of the controversy occurred at the time when geochemistry was as a new and powerful tool The new techniques opened era during which emerging an granites were considered mainly from this new viewpoint Geochemical signatures have shown that mantle and crustal origins for granites were both possible but the debate on how and why granites are emplaced did not progress much Meanwhile structural geology was essentially geometrical and mechanistic In the early 70 s the structural approach began to widen to include solid state physics and fluid dynamics Detailed structural maps of granitic bodies were again published mainly in France and analysed in terms of magmatic and plastic flow The senior editor of this volume and his students deserve much of the credit for this new development Via microstructural and petrofabric studies they were able to discriminate between strain in the presence of residual melt or in the solid state and by systematically measuring magnetic fabrics AMS they have been able to map magmatic foliations and lineations in ever finer detail using the internal markers within granites coming from different tectonic environments The traditional debate has been shifted anew The burning question now seems to be how the necessary large scale or local crustal extension required for granite emplacement can be obtained Geologic Structure Stability and Deep Protection Construction Gary B. Clark, George Bromley Clark, R. D. Caudle, 1961 A study is made of the problems associated with protective construction in rock particularly deep protective structures Information drawn from the experience of mining engineers and from past weapons tests is given on rock structure and properties and on theories relating these to the stability of underground openings under both static and dynamic loads Recommendations are made for meeting design problems for underground protective structures and for research to improve the reliability of the designs Economic Geology and the Bulletin of the Society of Economic Geologists, 1955 **Geologic Reference Sources** Dederick C.
