Structure And Motion Membranes Nucleic Acids And Proteins:

Structure and Dynamics of Nucleic Acids, Proteins, and Membranes E. Clementi, S. Chin, 2012-12-06 This volume collects a number of the invited lectures and a few selected contributions presented at the International Symposium on Structure and Dynamics of Nucleic Acids Proteins and Membranes held August 31st through September 5th 1986 in Riva del Garda Italy The title of the conference as well as a number of the topics covered represent a continuation of two previous conferences the first held in 1982 at the University of California in San Diego and the second in 1984 in Rome at the Accademia dei Lincei These two earlier conferences have been documented in Structure and Dynamics Nucleic Acids and Proteins edited by E Clementi and R H Sarma Adenine Press New York 1983 and Structure and Motion Membranes Nucleic Acids and Proteins edited by E Clementi G Corongiu M H Sarma and R H Sarma Adenine Press New York 1985 At this conference in Riva del Garda we were very hesitant to keep the name of the conference the same as the two previous ones Indeed a number of topics discussed in this conference were not included in the previous ones and even the emphasis of this gathering is only partly reflected in the conference title An alternative title would have been Structure and Dynamics of Nucleic Acids Proteins and Higher Functions or possibly higher components rather than higher functions **Structure and**

Motion Enrico Clementi, 1985 **Nonlinear Physics of DNA** Ludmila V. Yakushevich, 2006-01-24 The first edition of this book was the first on the physics of DNA to go beyond the simple simplified linear approach and it has since been found that the inclusion of nonlinear effects leads to a significantly improved interpretation of experimental data This new edition naturally retains this approach but has been completely revised updated and expanded to cover recent developments Beginning with introductory chapters on DNA structure and dynamics the book also includes a comparison between linear and nonlinear approaches to the DNA molecule a chapter devoted to the statistics of nonlinear excitations of DNA and examples for the interpretation of experimental data on the dynamics of DNA in terms of nonlinear theory Essential reading for researchers in biophysics and nonlinear physics allowing biologists chemists and physicists to continue developing new and improved techniques of investigating the DNA molecule **Current Catalog** National Library of Medicine (U.S.), 1985

First multi year cumulation covers six years 1965 70 **Reviews in Computational Chemistry, Volume 17** Kenny B. Lipkowitz, Donald B. Boyd, 2003-04-24 Computational chemistry is increasingly used in most areas of molecular science including organic inorganic medicinal biological physical and analytical chemistry Researchers in these fields who do molecular modelling need to understand and stay current with recent developments This volume like those prior to it features chapters by experts in various fields of computational chemistry Two chapters focus on molecular docking one of which relates to drug discovery and cheminformatics and the other to proteomics In addition this volume contains tutorials on spin orbit coupling and cellular automata modeling as well as an extensive bibliography of computational chemistry books FROM REVIEWS OF THE SERIES Reviews in Computational Chemistry remains the most valuable reference to methods and

techniques in computational chemistry JOURNAL OF MOLECULAR GRAPHICS AND MODELLING One cannot generally do better than to try to find an appropriate article in the highly successful Reviews in Computational Chemistry The basic philosophy of the editors seems to be to help the authors produce chapters that are complete accurate clear and accessible to experimentalists in particular and other nonspecialists in general JOURNAL OF THE AMERICAN CHEMICAL SOCIETY

Nucleic Acids Nancy C. Stellwagen, Udayan Mohanty, 2004 Curvature and Deformation of Nucleic Acids Recent Advances New Paradigms presents an up to date review on the curvature and deformation of nucleic acids Chapter 1 sets the various chapters in context as well as describing several controversial topics Chapter 2 gives a comprehensive review of the literature on DNA bending and describes the current status of molecular dynamics simulations of DNA and protein DNA complexes Chapter 3 describes the structural basis for A tract DNA helix bending based on recent NMR structures and other biophysical measurements Chapter 4 describes the localization of Mg ions in the crystal structure of a B form DNA dodecamer and discusses the relevance of these bound ions to sequence dependent bending Chapter 5 discusses the electrostatic energy penalties that result from phosphate crowding in curved DNA oligomers Chapter 6 presents a quantitative model that predicts the magnitude of the bend caused by asymmetric charge neutralization of DNA phosphate residues Chapter 7 reviews the structural and dynamic properties of four way DNA junctions in the presence of metal ions and it describes the exchange between alternative stacking conformers in solution Chapter 8 documents the fact that a conserved pseudouridine residue in an RNA duplex containing a precursor messenger branch site makes an important contribution to the structure of the molecule Chapter 9 describes structural perturbations that are observed in disease related mutants of human mitochondrial transfer RNAs Chapter 10 reviews the thermodynamics of the folding and unfolding of DNA oligomers distorted by the binding of small ligands Chapter 11 describes a method of constructing DNA fragments for cyclization studies that uses single strand gaps as flexible hinges that allow the correct torsional orientation of the helix ends Chapter 12 reviews a statistical mechanical model that predicts the stability of reconstituted nucleosomes based on sequence dependent DNA curvature and flexibility
