Follows a comparative approach to the study of existing and newly derived techniques offering an informed choice of controllers and models. Presents novel work in modelling optimal control and systems identification to help you get the most from your engine designs. The editors collect the research of three groups of internationally recognised experts. It will be of interest to academics working in aeroengine control and to industrial practitioners concerned with their design. The work presented is easily extendible to other areas in which gas turbines play a role such as power engineering.
