Edwards, 1970 **A Comparison of Two Techniques of Attitude Scale Construction by the Equal-appearing Intervals Method** Richard I. Vande Veegaete, 1965 *Survey Research in the United States* Jean M. Converse, 2017-07-05

Hardly an American today escapes being polled or surveyed or sampled In this illuminating history Jean Converse shows how survey research came to be perhaps the single most important development in twentieth century social science Everyone interested in survey methods and public opinion including social scientists in many fields will find this volume a major resource Converse traces the beginnings of survey research in the practical worlds of politics and business where elite groups sought information so as to influence mass democratic publics and markets During the Depression and World War II the federal government played a major role in developing surveys on a national scale In the 1940s certain key individuals with academic connections and experience in polling business or government research brought surveys into academic life By the 1960s what was initially viewed with suspicion had achieved a measure of scientific acceptance of survey research The author draws upon a wealth of material in archives interviews and published work to trace the origins of the early organizations the Bureau of Applied Social Research the National Opinion Research Center and the Survey Research Center of Michigan and to capture the perspectives of front line figures such as Paul Lazarsfeld George Gallup Elmo Roper and Rensis Likert She writes with sensitivity and style revealing how academic survey research along with its commercial and political cousins came of age in the United States *A Comparison of the Thurstone and Likert Techniques of Attitude Scale Construction* Allen Louis Edwards, Kathryn Claire Kenny, 1946 **Scientific Attitude and Cognitive Styles** D.N. Maranell,2017-07-05 Despite the obvious importance of measurement in any scientific endeavor few students of the social sciences receive adequate training in the principles and problems of assigning numerical values to the subjects objects events groups and operations they study and still less in the process of translating theoretical ideas and concepts into variables This kind of casualness with respect to measurement is often in marked contrast to their methodically designed research which has grown out of subtle and sophisticated theoretical consideration *Scaling* is intended to remedy this deficiency by providing a broad and detailed description of the major processes for developing measurement scales The chapters which include both classics in the field and the best of modern work require no great mathematical sophistication and go well beyond the conventional study of attitudes to the more general uses of scaling They enable the student and researcher to examine the development of measures of scalability and the problems and weaknesses they present to become familiar with the development of tests of significance for reproducibility and scalability and the need for them and to examine the lively history of the subject and experience the excitement that can be secured from sharing with a creative author the first report of his insight Part One presents a series of general articles that deal in philosophic terms with the problem of measurement with what is meant by measurement and scaling as well as the notions underlying the process of measuring Part Two deals with the scaling methods developed by L L Thurstone including paired comparison scaling equal appearing interval scaling and successive interval scaling The third part focuses upon scalogram analysis presenting the background rationale and procedures for Guttman scaling The fourth part is concerned with summated rating or Likert scaling Part Five is a consideration of unfold **The Corsini Encyclopedia of Psychology, Volume 4** Irving B.
