# Beyond the smart city: a communications-led agenda for twentyfirst century cities

<https://doi.org/10.1515/omgc-2023-0018>

Received April 11, 2023; accepted May 26, 2023

**Abstract:** Digital media technologies, from networked sensors to large video screens and mobile devices, have become pervasive urban infrastructure in the twentyfirst century. The dominant framework for understanding the integration of digital technology into urban space has been smart city discourse. In this article, I will argue that this framework, as it has so far been articulated, is inadequate to maximizing the social potential of digital urban infrastructure. Digital urban infrastructure not only changes how cities look, but how they function as social settings. I will propose the ‘communicative city’ as an alternative framework for thinking about digitally mediated cities. The communicative city offers an opportunity to consider networked urban space as a test case in which key problematics of contemporary globalized media are materially instantiated. It is the frontier zone at which everyday experiences of embodied media and new forms of communicative agency collide with powerful logics of tracing and tracking, and the widespread deployment of new forms of automation and machine learning as techniques of urban governance.

**Keywords:** communicative city; digital infrastructure; smart city; urban communication

## 1 Introduction

The first decade of the 2000s was marked by a rapid rise in the global prominence of the ‘smart city’.<sup>1</sup> While the term inevitably lacked consensus as to its precise meaning, it gained considerable momentum by combining an industry-led agenda for digital infrastructure provision with a broad, data-led urban imaginary. Smart

---

1 One, admittedly imprecise but indicative, measure of this comes from Google’s N-Gram viewer, where a search for the ‘smart city’ string languishes near zero until the year 2000, tips upwards from around 2007 and then spikes almost perpendicularly from 2010 onwards.
