Technology and Applications of Amorphous Silicon Robert Street, 2014-01-15 *Materials Issues in Applications of Amorphous Silicon Technology*, 1985 *Frontiers In Electronics: Future Chips, Proceedings Of The 2002 Workshop On Frontiers In Electronics (Wofe-02)* Yoon Soo Park, Michael S Shur, William Tang, 2003-01-29 The 2002 Workshop on Frontiers in Electronics was the third in the series of WOFE workshops Over 70 leading experts from academia industry and government agencies reported on the most recent developments in their fields and exchanged views on future trends and directions of the electronics and photonics industry The issues they addressed ranged from system on chip to DNA doping from ultrathin SOI to electrotiles from photonics integration on the ULSI platform to wide band gap semiconductor devices and solid state lighting The rapid pace of electronic technology evolution compels a merger of different technical areas and WOFE 02 provided a unique opportunity for cross fertilization of the emerging fields of microelectronics photonics and nanoelectronics The workshop was informal and stimulated provocative views visionary outlooks and discussions on controversial issues Nanostructured and Advanced Materials for Applications in Sensor, Optoelectronic and Photovoltaic Technology Ashok K. Vaseashta, D. Dimova-Malinovska, J.M. Marshall, 2005-09-01 The principal aim of this NATO Advanced Study Institute ASI Nanostructured and Advanced Materials for Applications in Sensor Optoelectronic and Photovoltaic Technology was to present a contemporary overview of the field of nanostructured and advanced electronic materials Nanotechnology is an emerging scientific field receiving significant worldwide attention On a nanometer scale materials or structures may possess new and unique physical properties Some of these are now known to the scientific community but there may well be many properties not yet known to us rendering it as a fascinating area of research and a suitable subject for a NATO ASI Yet another aspect of the field is the possibility for creating meta stable phases with unconventional properties and the ultra miniaturization of current devices sensors and machines Such nanotechnological and related advanced materials have an extremely wide range of potential applications viz nanoscale electronics sensors optoelectronics photonics nano biological systems na medicine energy storage systems etc This is a wide ranging subject area and therefore requires the formation of multi disciplinary teams of physicists chemists materials scientists engineers molecular biologists pharmacologists and others to work together on the synthesis and processing of materials and structures the understanding of their physical properties the design and fabrication of devices etc Hence in formulating our ASI we adopted an interdisciplinary approach bringing together recognised experts in the various fields while retaining a level of treatment accessible to those active in specific individual areas of research and development **Renewable Energy Technologies--research Directions, Investment Opportunities, and Challenges to Commercial Application in the United States and the Developing World** United States. Congress. House. Committee on Science. Subcommittee on Energy, 2006 *Physics and Applications of Non-Crystalline Semiconductors in Optoelectronics* A. Andriesh, M.

Bertolotti,2012-12-06 The Workshop on Physics and Application of Non crystalline Semiconductors in Optoelectronics was held from 15 to 17 October 1996 in Chisinau republic of Moldova and was devoted to the problems of non crystalline semiconducting materials The reports covered two main topics theoretical basis of physics of non crystalline materials and experimental results In the framework of these major topics there were treated many subjects concerning the physics of non crystalline semiconductors and their specific application optical properties of non crystalline semiconductors doping of glassy semiconductors and photoinduced effects in chalcogenide glasses and their application for practical purposes methods for investigation of the structure in non crystalline semiconductors new glassy materials for IR transmittance and optoelectronics Reports and communications were presented on various aspects of the theory new physical principles studies of the atomic structure search and development of optoelectronics devices Special attention was paid to the actual subject of photoinduced transformations and its applications Experimental investigations covered a rather wide spectrum of materials and physical phenomena As a novel item it is worth to mention the study of nonlinear optical effects in amorphous semiconducting films The third order optical nonlinearities fast photoinduced optical absorption and refraction acousto optic effects recently discovered in non crystalline semiconductors could potentially be utilised for optical signal processing The important problems of photoinduced structural transformations and related phenomena which are very attractive and actual both from the scientific and practical points of view received much attention in discussions at the conference
