Technology And Choice Readings From Technology And Culture:

Technology and Choice Marcel Chotkowski LaFollette, Jeffrey K. Stine, 1991 Innovation the imaginative attempt to introduce something new or to solve some problem smashes routine and demands choice even if only the choice to retain the status quo This collection of fourteen essays provides a spectrum of historical perspectives on how when or why individuals societies governments and industries have made choices regarding the use of technologies **Technology and Values**

Kristin Shrader-Frechette, Laura Westra, 1997-10-30 Technology and Values provides a highly useful collection of essays organized around issues related to science technology public health economics the environment and ethical theory The editors present effective introductions that provide background information as well as philosophical tools and case studies to facilitate understanding of the variety of issues emanating from the most significant developments in technology including the effects on privacy of the widespread use of computers to store and retrieve personal information and the ethical considerations of genetic engineering *Early American Technology* Judith A. McGaw, 2014-01-01 This collection of original essays documents technology s centrality to the history of early America Unlike much previous scholarship this volume emphasizes the quotidian rather than the exceptional the farm household seeking to preserve food or acquire tools the surveyor balancing economic and technical considerations while laying out a turnpike the woman of child bearing age employing herbal contraceptives and the neighbors of a polluted urban stream debating issues of property odor and health

These cases and others drawn from brewing mining farming and woodworking enable the authors to address recent historiographic concerns including the environmental aspects of technological change and the gendered nature of technical knowledge Brooke Hindle s classic 1966 essay on early American technology is also reprinted and his view of the field is reassessed A bibliographical essay and summary of Hindle s bibliographic findings conclude the volume The contributors are Judith A McGaw Robert C Post Susan E Klepp Michal McMahon Patrick W O Bannon Sarah F McMahon Donald C Jackson Robert B Gordon Carolyn C Cooper and Nina E Lerman Effects of Information Capitalism and Globalization on Teaching and Learning Adeoye, Blessing F., 2014-06-30 This book examines issues concerning emerging multimedia technologies and their challenges and solutions in teaching and learning exploring the global society s effect on learning Provided by publisher

Scripts, Grooves, and Writing Machines Lisa Gitelman, 1999 The phonograph and the typewriter may be things of the past but this book will resonate with readers who are engaged daily with computer networks hypertexts and the forms that mass media will take in the new century BOOK JACKET **Civil and Environmental Engineering: Concepts, Methodologies, Tools, and Applications** Management Association, Information Resources, 2016-01-31 Civil and environmental engineers work together to develop build and maintain the man made and natural environments that make up the infrastructures and ecosystems in which we live and thrive Civil and Environmental Engineering Concepts Methodologies Tools and Applications is a comprehensive multi volume publication showcasing the best research on topics pertaining to road design building

Media/Theory Shaun Moores, 2007-05-07 From an established author with a growing international profile in media studies Media Theory is an accessible yet challenging guide to ways of thinking about media and communications in modern life Shaun Moores draws on ideas from a range of disciplines in the humanities and social sciences and expertly connects the analysis of media and communications with key themes in contemporary social theory Examining core issues of time and space Moores also examines matters of interactions signification and identity and argues that media studies is bound up in the wider processes of the modern world and not just about studying the media This book makes a distinctive contribution towards rethinking the shape and direction of media studies today and for students at advanced undergraduate or postgraduate level

Beyond Engineering Robert Pool, 1997-07-17 We have long recognized technology as a driving force behind much historical and cultural change The invention of the printing press initiated the Reformation The development of the compass ushered in the Age of Exploration and the discovery of the New World The cotton gin created the conditions that led to the Civil War Now in Beyond Engineering science writer Robert Pool turns the question around to examine how society shapes technology Drawing on such disparate fields as history economics risk analysis management science sociology and psychology Pool illuminates the complex often fascinating interplay between machines and society in a book that will revolutionize how we think about technology We tend to think that reason guides technological development that engineering expertise alone determines the final form an invention takes But if you look closely enough at the history of any invention says Pool you will find that factors unrelated to engineering seem to have an almost equal impact In his wide ranging volume he traces developments in nuclear energy automobiles light bulbs commercial electricity and personal computers to reveal

that the ultimate shape of a technology often has as much to do with outside and unforeseen forces For instance Pool explores the reasons why steam powered cars lost out to internal combustion engines He shows that the Stanley Steamer was in many ways superior to the Model T it set a land speed record in 1906 of more than 127 miles per hour it had no transmission and no transmission headaches and it was simpler one Stanley engine had only twenty two moving parts and quieter than a gas engine but the steamers were killed off by factors that had little or nothing to do with their engineering merits including the Stanley twins lack of business acumen and an outbreak of hoof and mouth disease Pool illuminates other aspects of technology as well He traces how seemingly minor decisions made early along the path of development can have profound consequences further down the road and perhaps most important he argues that with the increasing complexity of our technological advances from nuclear reactors to genetic engineering the number of things that can go wrong multiplies making it increasingly difficult to engineer risk out of the equation Citing such catastrophes as Bhopal Three Mile Island the Exxon Valdez the Challenger and Chernobyl he argues that is it time to rethink our approach to technology The days are gone when machines were solely a product of larger than life inventors and hard working engineers Increasingly technology will be a joint effort with its design shaped not only by engineers and executives but also psychologists political scientists management theorists risk specialists regulators and courts and the general public Whether discussing bovine growth hormone molten salt reactors or baboon to human transplants Beyond Engineering is an engaging look at modern technology and an illuminating account of how technology and the modern world shape each other

Ethics of Scientific Research

Kristin Shrader-Frechette, 2000-01-01 Challenging long held theories of scientific rationality and remoteness Kristin Shrader Frechette argues that research cannot be value free Rather any research will raise important moral issues for those involved issues not only of truthfulness but of risk to research subjects third parties and the general public
