Technology Imports and Economic Growth in Developing Countries Heng-Fu Zou, 1999 January 1995 A developing country's economic growth rate increases as foreign technology imports increase In developing countries increases in productivity depend not on innovation but on importing foreign plants and equipment and on borrowing foreign technology Zhang and Zou investigate the relationship between foreign technology imports and economic growth in developing countries They develop an intertemporal endogenous growth model that explicitly accepts foreign technology imports as a factor of production The model establishes a link between the growth rate of productivity in a developing country and the country's intensity of learning to use foreign technologies They hypothesize that a developing country's economic growth rate increases as foreign technology imports increase They run regressions with data for about 50 developing countries using different econometric methods and time spans These empirical tests confirm the hypothesis that foreign technology transfers boost income growth rates Moreover economic developing in developing countries differs from that in industrial countries In developing countries increases in productivity depend not on innovation but on importing foreign plants and equipment and on borrowing foreign technology This paper a product of the Public Economics Division Policy Research Department is part of a larger effort in the department to understand economic growth and foreign trade Heng fu Zou may be contacted at hzhou@worldbank.org
