Telecommunications In Transition Policies Services And Technologies In The European Community:

Telecommunications in Transition Charles W. Steinfield, Johannes Bauer, Laurence Caby, 1994 In today's global economy the role of telecommunications is becoming increasingly strategic. Nowhere is this more apparent than in the evolving European Community where the players, issues, emerging technologies, services and policy trends are undergoing unprecedented change. In this volume leading scholars from both North America and Europe provide the necessary background information for analyzing European telecommunications policies including conceptual frameworks, institutional structures, liberalization approaches and new technology and service initiatives. This is the only text to examine issues comparatively across national contexts and includes a broad perspective of the entire European Community.

Telecommunications Policy-making in the European Union Joseph W. Goodman, 2006-01-01 This book offers a good study of the development of telecommunications policy by the EU. Great value to those interested in understanding both European telecommunications policy and more generally in how policy making operates in the EU. Mark Thatcher, West European Politics. The book provides an interesting perspective on the evolution of nature of telecommunications policy making within the EU. As a consequence, the book should be of interest to telecommunications and politics government researchers alike. Jason Whalley, Communications Booknotes Quarterly. This well-written book deals with the emergence and shaping of telecommunications policy in Europe with a particular focus on the time period of 1987-1998. This book fills an important gap, reviewing the initial formative years of European telecommunications policy development and liberalization in detail. The book captures the complicated and interdependent policy formation process in Europe in a credible and thoughtful way without falling into the trap of admiring critical personalities and key actors. The author has written an important and useful book which invites the research community to further explore the evolution of European telecommunications policy. Erik Bohlin, Communications Strategies. Examining the emergence of a European Union telecommunications policy, Joseph Goodman explains how and why the policy developed as it did and why certain reforms in the sector were easier to achieve than others. He provides a history of the key actors in the policy making process from the first attempts by the national postal telegraph and telecommunication administrations to coordinate their telecommunications policies in the 1950s to the implementation of a comprehensive EU telecommunications regulatory structure in 1998 and the development of a new regulatory structure in 2003. The analytical framework employed by the author draws upon new institutionalism and actor-based approaches, providing an opportunity to evaluate the utility of a synthetic approach for examining and explaining EU policy making. The focus of his analysis is on the European Commission's two-pronged strategy of liberalisation and harmonisation which began in the late 1980s and culminated in an important milestone on January 1st 1998 when the EU Member States fully opened their telecommunications markets to competition. He concludes that a synthetic approach which enables the researcher to apply a number of approaches to multiple settings and various levels of analysis is useful even

necessary in understanding and explaining the many dimensions of EU policy making This authoritative study will be of interest to all those in the telecommunications industry including attorneys consultants and lobbyists who would like to know how the EU s policy developed It will appeal more generally to political scientists and scholars of European history and politics

Managing Telecommunications and Networking Technologies in the 21st Century: Issues and Trends Grant, Gerald G.,2000-07-01 This book explores some of the developing trends and issues in telecommunications and networking Provided by publisher

Universal Service in WTO and EU law Olga Batura,2015-10-07 This book is a systematic comparative study of WTO and EU law relevant for universal service provision and a timely contribution to the ongoing scholarly and policy debates about the concept and scope of universal service Universal service is one of the most significant regulatory issues worldwide and it is likely to remain so The central question dealt with by the author is how the technologically intensive sector of telecommunications services can be regulated in a socially fair way in the light of liberalisation and the immense importance of ICTs in the Information Society The author investigates whether the legal frameworks of WTO and EU can meet the challenges of the rapid and dramatic technological and social change and formulates relevant policy recommendations The book is of interest to both scholars and practitioners in several disciplines such as EU and WTO law telecommunications law and regulation political science regarding market regulation and governance as well as European integration and WTO Olga Batura is affiliated to the Leuphana Law School University of Lüneburg Germany and to the European Humanities University in Vilnius Lithuania

The Political Economy of European Union Competition Policy Tuna Baskoy,2008-06-24 In the European Union EU competition policy occupies a central place amongst other EU public policies and is the first truly supranational public policy regulating market competition One of the stated objectives of EU competition policy is to prevent excessive concentration of economic power in the hands of a few

Globalisation and EU Policy-making Ian Bartle,2005 Assesses and contrasts the roles of globalisation institutions and ideas on policy making in the EU Views the creation of liberalised European single markets in the telecommunications and electricity supply sectors out of national monopolies as an example of the dramatic transformation of economic organisation across Europe in the last twenty years Connects micro policy making processes in two industrial sectors to macro international political economy Covers the period from the mid 1980s when the single market came on the agenda through the liberalising initiatives in the 1990s to the new regulatory framework in communications in 2002 and the 2003 directive on the full liberalisation of electricity by 2007 Will be of interest to anyone studying globalisation European integration and policy making regulation and policy in utility sectors

Globalisation, Convergence and European Telecommunications Regulation Peter Humphreys,Seamus Simpson,2005-01-01 This book provides an up to date account and analysis of the development of the European Union s regulatory framework for telecommunications in a globalising world A key feature is its treatment of the EU s regulatory policy response to technological convergence in the information and

communications sector through its new Electronic Communications Regulatory Framework The book explores in detail the dynamics of the complex relationship between technological and globalisation pressures economic interests and European and national policy responses The authors also examine the achievements and limitations of over twenty years of EU efforts to liberalise markets and to harmonise regulation

The International Telecommunications Regime: Domestic Preferences and Regime Change Juan Ratto-Nielsen, 2009-12-26 This study examines the evolution of the international regime in telecommunications with the main objective of furthering our understanding of the process of regime transformation The dominant theories of international relations realism and institutional liberalism specify how states with shared interests use institutions to realize joint gains and to minimize the possibility of defection But these theories have little to say about when states will attempt to change the objectives that lead them to create the international institution in the first place The main goal of this book is to investigate and test the assumption that domestic politics by themselves can explain the dynamics of regime creation evolution and change as it happened within the International Telecommunications Union ITU

Wiring Europe Giorgio Natalicchi, 2001 Involving both integration and liberalization the state of telecommunications in Europe has undergone radical change in the past few years Natalicchi political science U of Florence Italy examines the external and internal forces of change originating from international national and European Union levels He argues that the EU is a polycentric and multilayered polity and that multiple mechanisms determine integrative steps and policy outcomes
