Small Area Estimation Methods And Applications:

Robust Small Area Estimation Jiming Jiang, J. Sunil Rao, 2025-08-20 In recent years there has been substantial and growing interest in small area estimation SAE that is largely driven by practical demands Here the term small area typically refers to a subpopulation or domain of interest for which a reliable direct estimate based only on the domain specific sample cannot be produced due to small sample size in the domain Keywords in SAE are borrowing strength Because there are insufficient samples from the small areas to produce reliable direct estimates statistical methods are sought to utilize other sources of information to do better than the direct estimates A typical way of borrowing strength is via statistical modelling On the other hand there is no free lunch Yes one can do better by borrowing strength but there is a cost This is the main topic discussed in this text Features A comprehensive account of methods applications as well as some open problems related to robust SAE Methods illustrated by worked examples and case studies using real data Discusses some advanced topics including benchmarking Bayesian approaches machine learning methods missing data and classified mixed model prediction Supplemented with code and data via a website Robust Small Area Estimation Methods Applications and Open Problems is primarily aimed at researchers and graduate students of statistics and data science and would also be suitable for geography and survey methodology researchers The practical approach should help persuade practitioners such as those in government agencies to more readily adopt robust SAE methods It could be used to teach a graduate level course to students with a background in mathematical statistics

Small Area Estimation J. N. K. Rao, Isabel Molina, 2015-08-10 Praise for the First Edition This pioneering work in which Rao provides a comprehensive and up to date treatment of small area estimation will become a classic I believe that it has the potential to turn small area estimation into a larger area of importance to both researchers and practitioners Journal of the American Statistical Association Written by two experts in the field Small Area Estimation Second Edition provides a comprehensive and up to date account of the methods and theory of small area estimation SAE particularly indirect estimation based on explicit small area linking models The model based approach to small area estimation offers several advantages including increased precision the derivation of optimal estimates and associated measures of variability under an assumed model and the validation of models from the sample data Emphasizing real data throughout the Second Edition maintains a self contained account of crucial theoretical and methodological developments in the field of SAE The new edition provides extensive accounts of new and updated research which often involves complex theory to handle model misspecifications and other complexities Including information on survey design issues and traditional methods employing indirect estimates based on implicit linking models Small Area Estimation Second Edition also features Additional sections describing the use of R code data sets for readers to use when replicating applications Numerous examples of SAE applications throughout each chapter including recent applications in U S Federal programs New topical coverage on extended design issues synthetic estimation further refinements and solutions

to the Fay Herriot area level model basic unit level models and spatial and time series models A discussion of the advantages and limitations of various SAE methods for model selection from data as well as comparisons of estimates derived from models to reliable values obtained from external sources such as previous census or administrative data Small Area Estimation Second Edition is an excellent reference for practicing statisticians and survey methodologists as well as practitioners interested in learning SAE methods The Second Edition is also an ideal textbook for graduate level courses in SAE and reliable small area statistics

Poverty and Social Exclusion Gianni Betti,Achille Lemmi,2013-07-18 Poverty and inequality remain at the top of the global economic agenda and the methodology of measuring poverty continues to be a key area of research This new book from a leading international group of scholars offers an up to date and innovative survey of new methods for estimating poverty at the local level as well as the most recent multidimensional methods of the dynamics of poverty It is argued here that measures of poverty and inequality are most useful to policy makers and researchers when they are finely disaggregated into small geographic units

Poverty and Social Exclusion New Methods of Analysis is the first attempt to compile the most recent research results on local estimates of multidimensional deprivation The methods offered here take both traditional and multidimensional approaches with a focus on using the methodology for the construction of time related measures of deprivation at the individual and aggregated levels In analysis of persistence over time the book also explores whether the level of deprivation is defined in terms of relative inequality in society or in relation to some supposedly absolute standard This book is of particular importance as the continuing international economic and financial crisis has led to the impoverishment of segments of population as a result of unemployment bankruptcy and difficulties in obtaining credit The volume will therefore be of interest to all those working on economic econometric and statistical methods and empirical analyses in the areas of poverty social exclusion and income inequality

Multivariate Analysis, Design of Experiments, and Survey Sampling Subir Ghosh,1999-04-29 Describes recent developments and surveys important topics in the areas of multivariate analysis design of experiments and survey sampling Features the work of nearly 50 international leaders
