Sleep and The Maturing Nervous System Carmine D. Clemente, 2012-12-02 Sleep and the Maturing Nervous System contains manuscripts presented at a conference on Sleep and the Maturing Nervous Systems held at the Allenberry Inn in Boiling Springs Pennsylvania on June 21 24 1970 The program is divided into five sessions The Maturation of Neural Elements Neurochemical Factors in Maturation of Sleep Behavior Development of EEG and Activity Patterns in Relation to Sleep Development of Reflex Patterns in Sleep and Developmental Aspects of Normal and Abnormal Sleep Behavior Organized into 19 chapters the book begins by discussing the ontogenetic studies ranging from analyses of excitability properties and synaptic processes in single immature cortical neurons to structure function correlations in developing cortical neuronal subsystems This is followed by significant topics on the mutual relevancy between brain maturation and the ontogeny of sleep wakefulness behavior Additional aspects of the book focus on the developmental implications of conditions that might lead to the establishment of normal and abnormal sleep behavior in maturing organisms A discussion on the problem of the mechanisms that underlie the unique distribution of behavior states at any particular age and during any particular experimental manipulation is provided along with a comparison of sleep behavior features between normal and mentally retarded subjects of the same age This book will be of value to researchers and scientists interested in both the genetic and environmental factors determining the brain maturation and its relevancy in sleep and wakefulness **Sleep** Teofilo L. Tighe,Robert N. Leaton,2016-07-15 Originally published in 1976 this volume is based on a conference held in 1974 The purpose of the conference was to foster communication between those researchers studying habituation or closely related processes in children and those studying habituation at the level of neurophysiology and animal behaviour Within each of these groups

there was burgeoning interest in habituation yet there had been little if any interaction between them Overall this volume provides a medium for cross fertilization between animal neurophysiological and developmental research on habituation highlighting some of the current empirical and theoretical concerns within each area at the time While other volumes may have provided more comprehensive and detailed reviews of aspects of habituation the juxtaposition of developmental and animal neuro physiological research provided in this text was unique in the literature at the time

Motivation Evelyn Satinoff, Philip Teitelbaum, 2013-11-11 Motivation addresses a central problem in psychology Why does an animal's behavior fluctuate in the face of an unaltered environment In a sense this is the opposite of the question from which work on motivation began and for which Claude Bernard invented the concept of the fixity of the internal milieu How does an animal maintain constancy in the face of a fluctuating environment Dealing with motivation has become extremely complex as new experiments phenomena and theories have extended the concept This book embodies some of the ways in which work on motivation is currently proceeding One of the major changes has been the recognition that motivation cannot be explained without an understanding of the biological rhythms and activational systems that underlie behavior Another is that ecological and evolutionary perspectives add enormously to answering the central problem of why an animal does what it does when it does The book suffers from several omissions There is no chapter on the development of motivated behavior There is none on reward systems in the brain owing to the untimely death of James Olds whose contribution would have enriched this book appreciably and to whom we dedicate it

Current Issues in Developmental Psychology A.F. Kalverboer, M.L. Genta, J.B. Hopkins, 2012-12-06 This volume contains a number of contributions which concern basic issues in the field of brain behavioural development in the human especially with regard to the young child They have been written by distinguished scientists active in this field who have all been participating in an Erasmus teachers exchange program entitled Biopsychology of Development ICP NL 3026 14 This volume is the product of this cooperation The book is intended for scientists in this and related fields as well as for graduate students and advanced undergraduates as a means of updating their knowledge about human brain behaviour development It offers a contemporary review methodologically and theoretically of some basic issues in early human brain behaviour development Attention is paid to normal development and also to deviance as exemplified by discussions on child abuse and on early development of preterms and children of deaf mothers For the title of the book we have chosen for the term Developmental Psychology with as a subtitle biopsychological perspectives in order to express our interest in the basic requirements in the organism for an optimal adaptation during ontogeny as well as in the mechanisms underlying maladaptive behaviour The term may indicate

that we are not just focusing on higher brain functions which would be suggested by the term Developmental Neuropsychology Further it is meant to express our interest in the integrated study of normal and deviant development without a particular focus on abnormality which would be suggested by the term Developmental Psychopathology

Awakening and Sleep-Wake Cycle Across Development Piero Salzarulo, Gianluca Ficca, 2002-05-29 Sleep and wakefulness undergo important changes with age Awakening a crucial event in the sleep wake rhythm is a transition implying complex physiological mechanisms Its involvement in sleep disturbances is also well known This collective volume is the first attempt to systematically approach awakening across development A methodological section considers criteria to define awakening in a developmental perspective Theoretical considerations on development of wakefulness and on its relation to consciousness are included and provide a vigorous impulse to go beyond present criteria and classifications Age changes are the core of studies on development a section of the book examines old and new data from preterm to infants up to children underscoring the main turning points along this developmental path As for other aspects of development awakening and the sleep wake cycle are also influenced by external factors both physical and human Several contributions deal with this topic in particular focusing on the parent infant interaction and the influences of culture Clinical contexts offer an opportunity to show both quantitative and qualitative changes of awakening and arousals in different pathological conditions Either partial changes of one physiological variable or global and massive changes can be observed Series B The Psychobiology of Childhood L.L. Greenhill, B. Shopsin, 2012-12-06 This volume was inspired by an annual meeting of the American College of Neuropsychopharmacology held in Maui Hawaii A panel on psychobiological issues of childhood was held with presentations devoted to antidepressant drug levels in depressed prepubertal children responses of normal and hyperactive children to stimulant medication and the vulnerability of the adolescent offspring of manic depressive parents to affective illnesses The session drew a large crowd and it seemed appropriate to develop these topics in a book Many of the authors in this volume attended that conference and the book reflects the fact that psychobiological research in children has moved even further along than was envisioned at Maui In keeping with developments in the field this volume surveys key topics of interest including nosological issues surrounding the attention deficit disorder of childhood the ontology of neurotransmitter systems in the human brain and the relation between child psychiatric disorders and sleep patterns Other studies link the clinical effects of drugs with plasma DBH activity or with attentional measures The side effects of on growth are examined as well as the ethical issues involved in drugs on children These areas continue to be of vital interest **Topics in the History of Psychology** G. A. Kimble, K. Schlesinger, 2014-03-18 First published in 1985 At one end of historical time scale speculations about psychological processes go back to classical Greek philosophy and beyond For centuries thereafter the treatment of psychological subject matter remained largely in the domain of other disciplines especially philosophy where it became inextricably interwoven with epistemology The chapters of this book glance only briefly at these philosophical antecedents to

review the basic concepts and principles that early investigators were to take for granted They tend then to move to the end of the last century when the systematic study of psychological processes began
