Reid Wagstaff, 1974 The Routledge Research Companion to

Energy Geographies Stefan Bouzarovski, Martin J Pasqualetti, Vanesa Castán Broto, 2017-07-06 Energy has become a central concern of many strands of geographical inquiry from global climate change to the effects of energy decisions on our lives. However, many aspects of the black box of relationships at the energy society interface remain unopened, especially in terms of the spatial underpinnings of energy production and consumption within nations, cities and regions. Debates focusing on the location and nature of energy flows frequently fail to consider the multiple geographical networks that illustrate and explain the distribution of fuels and services around the world. Providing an integrated perspective on the complex interdependencies between energy and geography, *The Routledge Research Companion to Energy Geographies* offers a timely conceptual framework to study the multiple facets of energy geography including security, space and place, planning, environmental science, economics and political science. Illustrating how a geographic approach towards energy can aid decision making pathways in the domains of social justice and environment, this book provides insights that will help move the international community toward greater cooperation, stability and sustainability.

Southeast Asian Energy Transitions Mattijs Smits, 2016-03-03 Addressing the apparent tensions between modernity and sustainability in Southeast Asia, this book offers novel insights into the global challenge of moving towards a low carbon energy system. With an original and accessible take on social theory related to energy transitions, modernity and sustainability, Mattijs Smits argues for a reinvigorated geography of energy. He also challenges universalistic and linear assumptions about energy transitions and makes the case for energy trajectories stressing embeddedness, contingency and connections between scales. Contemporary and historical empirical examples from Southeast Asia, primarily Thailand and Laos, are drawn upon to show the importance of scale at regional, national, local and household levels. The transitions in the national power sectors here have been intimately related to discourses of modernity and state formation since the colonial era. More recently, plans for international cooperation and discourses of regional power trade have taken centre stage. Local energy trajectories are understood to be part of these transitions but also as embedded in local social, political and spatial relations. Examining how energy practices go hand in hand with the dissemination of different technologies, this work shows the complexities of achieving sustainability in the context of rapidly changing energy modernities in Southeast Asia.

Energy Security and the Indian Ocean Region Dennis Rumley, Sanjay Chaturvedi, 2015-07-24 First published in 2005, this book is the second volume produced by the Indian Ocean Research Group, IORG. The Indian Ocean Region has become increasingly important to discussions on energy security, not only because of the critical importance of regional states as energy suppliers but also because of the essential role of the Ocean as an energy route. The main purpose of this volume is to provide an elaborate and critical evaluation of some of these issues and their implications for regions outside the Indian Ocean.
