The Health Detectives Handbook A Guide To The Investigation Of Environmental:

The Health Detective's Handbook Marvin S. Legator, 1985 **No Safe Place** Phil Brown, Edwin J.

Mikkelsen, 1997-10-10 Toxic waste contaminated water cancer clusters these phrases suggest deception and irresponsibility But more significantly they are watchwords for a growing struggle between communities corporations and government In *No Safe Place* sociologists public policy professionals and activists will learn how residents of Woburn Massachusetts discovered a childhood leukemia cluster and eventually sued two corporate giants Their story gives rise to questions important to any concerned citizen What kind of government regulatory action can control pollution Just how effective can the recent upsurge of popular participation in science and technology be Phil Brown a medical sociologist and Edwin Mikkelsen psychiatric consultant to the plaintiffs look at the Woburn experience in light of similar cases such as Love Canal in order to show that toxic waste contamination reveals fundamental flaws in the corporate governmental and scientific spheres The authors strike a humane constructive note amidst chilling odds advocating extensive lay involvement based on the Woburn model of civic action Finally they propose a safe policy for toxic wastes and governmental corporate responsibility Woburn the authors predict will become a code word for environmental struggles *Mother Jones Magazine*, 1985-07 *Mother Jones* is an award winning national magazine widely respected for its groundbreaking investigative reporting and coverage of sustainability and environmental issues Information Resources in Toxicology P.J. Bert Hakkinen, Asish Mohapatra, Steven G. G.

Gilbert, 2009-08-19 This latest version of *Information Resources in Toxicology* IRT continues a tradition established in 1982 with the publication of the first edition in presenting an extensive itemization review and commentary on the information infrastructure of the field This book is a unique wide ranging international annotated bibliography and compendium of major resources in toxicology and allied fields such as environmental and occupational health chemical safety and risk assessment Thoroughly updated the current edition analyzes technological changes and is rife with online tools and links to Web sites IRT IV is highly structured providing easy access to its information Among the hot topics covered are Disaster Preparedness and Management Nanotechnology Omics the Precautionary Principle Risk Assessment and Biological Chemical and Radioactive Terrorism and Warfare are among the designated International in scope with contributions from over 30 countries Numerous key references and relevant Web links Concise narratives about toxicologic sub disciplines Valuable appendices such as the IUPAC Glossary of Terms in Toxicology Authored by experts in their respective sub disciplines within toxicology The Workbook, 1987 *Chemical Consequences* Scott Frickel, 2004 Here is the first historical and sociological account of the formation of an interdisciplinary science known as genetic toxicology and of the scientists social movement that created it After research geneticists discovered that synthetic chemicals were capable of changing the genetic structure of living organisms scientists began to explore how these chemicals affected gene structure and function In the late 1960s a small group of biologists became concerned that chemical mutagens represented a serious and possibly global environmental

threat Genetic toxicology is nurtured as much by public culture as by professional practices reflecting the interplay of genetics research and environmental politics Drawing on a wealth of resources Scott Frickel examines the creation of this field through the lens of social movement theory He reveals how a committed group of scientist activists transformed chemical mutagens into environmental problems mobilized existing research networks recruited scientists and politicians secured financial resources and developed new ways of acquiring knowledge The result is a book that vividly illustrates how science and activism were interwoven to create a discipline that remains a defining feature of environmental health science

Chemical Alert! Marvin S. Legator, Sabrina F. Strawn, 2010-07-05 In the 1978 Love Canal toxic waste crisis concerned citizens did a far better job of evaluating the health of the community than did the professionals of the New York Health Department asserts Marvin Legator In *Chemical Alert A Community Action Handbook* he and coeditor Sabrina Strawn offer a step by step guide that can be used by any lay person or citizens group to determine whether a health risk exists in their area Writing for the general reader with no scientific expertise environmental medical and legal professionals instruct communities on the organizational and investigative techniques that will produce a valid scientific case study With these tools citizens living near petrochemical plants or waste disposal areas or who may have simply noticed a high incidence of certain health problems in their community can determine for themselves whether a problem really exists and seek remediation Given the reality that government agencies often lack the resources or the will to detect health hazards before they affect a community an informed citizenry should be its own best environmental watchdog

Future Survey Annual 1985 Michael Marien, 1987-01-01

Waste Location Michael Clark, Denis Fischbacher-Smith, Andrew Blowers, 2021-12-24 First published in 1992 *Waste Location* seeks to widen and integrate the debate on the intrinsically spatial nature of waste disposal The political and industrial significance of the new environmentalism of the 1980s came from the recognition of growing public pressure for environmental quality and product reliability Attention was turned to waste as the product of consumption As the political economy of waste was explored new issues were raised new technologies recycling pollution havens waste minimization location of landfill sites and incinerator facilities and environmental crime responsibility and planning The 1990s sees the advocates of cradle to grave responsibility still battling the promoters of market forces One of the major developments in the study of waste collection and disposal was the new forms of data collection and handling technology The contributors consider both geotechnics and geographical information systems within this context The focus on the geography of the UK is set within the broader framework of political economy and the international trade in pollution exports The case studies presented range from bin analysis through a Bayesian perspective on risk to the global politics of international waste streams Together the contributors provide a comprehensive overview of the waste location debate in the early 1990s Students of environment and climate change will find this book particularly enlightening

Social Epidemiology Julie Cwikel, 2006 By tracking the distribution of disease and pinpointing relevant risk factors social epidemiology reveals

how social problems are intrinsically linked to the health of populations The practice also takes into account the psychosocial biological and medical determinants of disease and health encouraging a rich and multidisciplinary approach to analyzing and solving complex contemporary social issues This book provides a clear and comprehensive set of tools for practice Julie Cwikel begins with an overview of the historical roots of public health and social medicine and shows how they formed the theoretical basis for current social epidemiological methods Cwikel then explains the theoretical and programmatic tools social epidemiologists use in their research program planning and evaluation In conclusion Cwikel demonstrates how the SOCEPID model can be applied to a range of topics including chronic illness obesity violence prevention occupational health sexually transmitted diseases especially HIV environmental hazards and addressing the needs of vulnerable populations such as immigrants and trafficked women With compelling authority Cwikel shows readers how the exciting and growing field of social epidemiology is both practical and activist drawing on cutting edge empirical findings to conduct policymaking research and promote health at both the personal and population levels
