Stellar Interiors:

Stellar Interiors Carl J. Hansen, Steven D Kawaler, 2012-12-06 That trees should have been cut down to provide paper for this book was an ecological affront From a book review Anthony Blond in the Spectator 1983 The first modern text on our subject Structure and Evolution of the Stars was published over thirty years ago In it Martin Schwarzschild described numerical experiments that successfully reproduced most of the observed properties of the majority of stars seen in the sky He also set the standard for a lucid description of the physics of stellar interiors Ten years later in 1968 John P Cox's two volume monograph Principles of Stellar Structure appeared as did the more specialized text Principles of Stellar Evolution and Nucleosynthesis by Donald D Clayton and what a difference ten years had made The field had matured into the basic form that it remains today The past twenty plus years have seen this branch of astrophysics flourish and develop into a fundamental pillar of modern astrophysics that addresses an enormous variety of phenomena In view of this it might seem foolish to offer another text of finite length and expect it to cover any more than a fraction of what should be discussed to make it a thorough and self contained reference Well it doesn't Our specific aim is to introduce only the fundamentals of stellar astrophysics You will find little reference here to black holes millisecond pulsars and other sexy objects

Interior Modelling of Massive Stars in Multiple Systems Cole Johnston,2021-05-21 This thesis by Cole Johnston brings novel insights into the inner workings of young massive stars By bridging the observational fields of binary stars and asteroseismology this thesis uses state of the art statistical techniques to scrutinise theories of modern stellar astrophysics Developing upon the commonly used isochrone fitting methodology the author introduces the idea of isochrone cloud fitting in order to account for the full breadth of physics observed in stars The author combines this methodology with gravity mode asteroseismic analysis to assess the level of chemical mixing deep within the stellar core in order to determine the star's age and core mass Wrapped into a robust statistical framework to account for correlations this methodology is employed to analyse individual stars multiple systems and clusters alike to demonstrate that chemical mixing has dramatic impact on stellar structure and evolution *Literature 1975, Part 1* S.
