Transactions of the International Astronomical Union E.A. Müller, A. Jappel, 2012-12-06 The General Assemblies of the International Astronomical Union are landmarks in the life of the world wide astronomical community as they review at triennial intervals the progress made in this scientific field promulgate the most spectacular astronomical achievements formulate scientific programmes for the years to come and last but not least deal with the administration and finances of the IAU The Reports on Astronomy 1976 published as Transactions XVIIA in 3 volumes before the XVIth General Assembly are a synopsis of the work done in astronomy from 1973 to 1975 The volume Highlights of Astronomy as presented at the XVIth General Assembly of the IAU in Grenoble 1976 includes some selected scientific topics and will appear in the first half of 1977 Apart from the Invited Discourses and the Proceedings of the seven Joint Discussions the Highlights volume No 4 contains the proceedings of two Joint Commissions Meetings **Transactions of the International Astronomical Union** G. Contopoulos, A. Jappel, 2012-12-06 The three years since the Brighton General Assembly have been the most active period in the history of the Union 33 IAU Symposia and Colloquia the first Regional Meeting under the Auspices of the IAU several co sponsored Meetings and many other special projects All this culminating with two General Assemblies in two opposite parts of the Earth Australia and Poland At the same time the membership of the Union rose to 3200 the number of Commissions to 40 the number of adhering countries to 47 The present Volume gives a general picture of the Union's recent activity It contains the report of the Executive Committee the report of the General Assembly including the Commissions Meetings a short report on the Extraordinary General Assembly and an Appendix with the Members and Commissions of the IAU and the approved names of Lunar and Martian features I take this opportunity to thank all our collaborators members of the Executive Committee Presidents of Commissions Chairmen of Specific Projects IAU Secretaries and all the Members of the IAU for their contribution to keep our Union a living body of active scientists and a big international family G. Contopoulos General Secretary CONTENTS Page No Formation and Evolution of Galaxy Bulges (IAU S245) International Astronomical Union. Symposium, 2008-09-04 Bulges lie at the heart of most galaxies the building blocks of our universe With a selection of reviews and topical presentations IAU Symposium 245 provides an up to date overview of our knowledge on galaxy bulges and a concise introduction to all current research on the subject The structure dynamics and stellar populations of galaxy bulges both near and far are analysed through state of the art observations The leading models for the formation and evolution of galaxy bulges are described in detail and the constraints observations put on these are dissected Particular emphasis is placed on exploring evidence for both hierarchical merging and secular processes Special attention is also devoted to disentangling the complex web relating galaxy bulges and central supermassive black holes and

on the lessons learned from our exquisite knowledge of the bulge of our own Milky Way This volume is the best one stop reference on galaxy bulges currently available Cosmic Magnetic Fields (IAU S259) International Astronomical Union. Symposium,2009-06-11 IAU Symposium 259 presents the first interdisciplinary comprehensive review of the role of cosmic magnetic fields involving astronomers and physicists from across the community Offering both theoretical and observational topics ranging from Earth's habitability to the origin of the universe this is an invaluable summary for researchers and graduate students **Dynamical Evolution of Dense Stellar Systems (IAU S246)** International Astronomical Union. Symposium,2008-06-12 Dense stellar systems lie at the interface between dynamics stellar evolution and galaxy formation and they provide us with an ideal laboratory to understand many different aspects of these important fields as well as to explore the interplay between them The complete study of dense stellar systems is a very challenging task which requires the collaboration and the exchange of ideas of astronomers and physicists with observational and theoretical expertise in galactic and extra galactic astronomy stellar dynamics hydrodynamics stellar evolution as well as knowledge of many aspects of computational physics IAU Symposium 246 brought together experts in all these areas to cover the broad field of dense stellar systems with particular emphasis on the interplay between them and on the comparison between observations and simulations This volume provides a complete review of the most recent studies in this topical research *INIS Atomindex*,1985 *Linear Isentropic Oscillations of Stars* Paul Smeyers,Tim Van Hoolst,2011-01-18 This book surveys the theory of free linear isentropic oscillations in spherically symmetric gaseous equilibrium stars from basic concepts to asymptotic representations of normal modes and with slow period changes in rapidly evolving pulsating stars **Transactions of the International Astronomical Union** International Astronomical Union,1977 Literature 1974, Part 2 S. Böhme,U. Esser,W. Fricke,U. Güntzel-Lingner,F. Henn,D. Krahn,H. Scholl,G. Zech,2013-11-11 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume 12 contains literature published in 1974 and received before March 15 1975 some older literature which was received late and which is not recorded in earlier volumes is also included Beginning with volume 11 some minor changes of our classification scheme have been made We acknowledge with thanks contributions to this volume by Dr J Bouska who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Common

International Astronomical Union. Symposium,2008-12-18 Stellar models are the very basic building blocks with which we build up our knowledge of the Universe New numerical experiments are heralding a new level of sophistication in our ability to model and understand how stars work This volume provides an overview and the most recent advances in modeling of stellar structure and evolution Modeling of stars relies on our understanding of the detailed physical processes happening in stars and the most recent observations of stars made by modern large telescopes and current high technologies IAU Symposium 252 presents the most recent developments in five key areas including improvements of the physical ingredients of stellar models the evolution of low and intermediate mass stars the evolution of massive stars close binary evolution and stellar physics in the era of very large telescopes This overview of stellar research is at a level suitable for research astronomers and graduate students *The Future of Asteroseismology* Joyce Ann Guzik,Markus Roth,2021-08-17 *Galaxy Evolution Across the Hubble Time (IAU S235)* International Astronomical Union. Symposium,2007-05-17 This last decade has witnessed a revolution in our observations of galaxies in particular deep imaging with HST and spectroscopy with 10m class ground based telescopes have uncovered many objects that are difficult to place along the Hubble sequence High resolution spectroscopy of extremely faint objects has enabled the study of the kinematic evolution and hence the mass assembly of galaxies to unprecedented look back times for direct comparison with cosmological structure formation scenarios Thus it is now possible to study all three aspects of galaxy evolution their morphological dynamical chemical and spectral evolution out to redshift larger than six exploring more than 95% of the age of the universe These Proceedings of the IAU Symposium 235 report the considerable progress made in recent years on galaxy formation and evolution and look forward to the expected breakthroughs in the domain of remote galaxies with ALMA the ELT and the next generation space telescopes

Convection in Astrophysics (IAU S239) International Astronomical Union. Symposium,2007-06-07 Convection is ubiquitous throughout the Universe and during the last three decades it has become the largest factor of uncertainty in theoretical models of stars and in the interpretation of observations on the basis of such models Recently numerical simulations of convection have dramatically improved in their potential to take into account both the large scale properties of the flow itself and the microphysical properties of the fluid Observations have become accurate enough to provide stringent tests for both numerical simulations and models of convection IAU S239 was held to further understanding of convection bringing together leading researchers in solar and stellar physics the physics of planets and of accretion disks With reviews research contributions and detailed recordings of plenary discussions this book is a valuable resource for professional astronomers and graduate students interested in the interdisciplinary study of one of the key physical processes in astrophysics **Symposium** International Astronomical Union,1978 **Flare Stars in Star Clusters, Associations, and**

the Solar Vicinity International Astronomical Union. Symposium, 1990-06-30 Some 70 papers present the flare star problem from both a physical and evolutionary aspect and represent an interaction between investigators working on flare stars in clusters and associations and those working on the UV Ceti stars in solar vicinity The variety of perspectives reveal a physical similarity among several non stable phenomena and suggest that the different manifestations of stellar activity result from the release of some unknown kind of energy in the outer layers of young stars The papers deal not only with different aspects of flare stars but also with such related objects as T Tauri stars flares and Herbig Haro objects Annotation copyrighted by Book News Inc Portland OR

The Galaxy Disk in Cosmological Context (IAU S254) International Astronomical Union. Symposium, Bengt Strömgren, 2009-04-16 The paradigm of a dark energy and dark matter dominated Universe with the hierarchical merger scenario for the formation of galaxies has scored impressive successes in matching the observed Universe However the theory fails to explain the difficulty in generating ordinary disk galaxies such as the Milky Way suggesting that some important physics must be missing in current models IAU Symposium 254 was organized to address this question gathering researchers from an unusually broad range of fields from cosmology to interstellar matter and the formation and evolution of stars High class reviews lectures and posters combine to define the frontiers in the field and point the way to new avenues of research This volume presents a unique set of succinct overviews illuminating the full range of topics in this very active field It also honors Danish astrophysicist Bengt Strömgren 1908-1987 who laid much of the foundation for this entire field

The A-Star Puzzle (IAU S224) International Astronomical Union. Symposium, 2005-04-25 Over the last few decades nuclear processes radiation transfer opacities and many other important physical processes have been incorporated in the modelling of stars As knowledge of these processes has advanced it has become clear that other associated physical processes are not well understood This volume investigates these processes focusing on convection diffusion rotation and magnetic fields It is a valuable resource for researchers in the field of stellar astrophysics and graduate students
