John Williams, 2024-05-23 This

book offers clarity and consistency of thinking in relation to Technology Education when situated within a STEM approach to teaching. It examines the range of Innovations and Issues which are being considered by schools as they implement STEM with particular focus on the place of Technology or the T in STEM. The book is divided into three sections: Philosophy, Implementation, and Issues and Innovations, with each containing five to seven chapters. The first section lays the foundations for the remainder of the book; it focuses the readers on the technology aspect of STEM education and situates it to align with the international understanding of technology education. The second section provides insights into how STEM is best implemented to give technology due consideration across a range of disciplines with technology education including engineering, food technology, and textile technology. This section also provides suggestions for the successful implementation of the STEM approach and offers further insight through a range of case studies. The third section outlines and discusses a range of issues that pose a threat to the position and understanding of technology within the STEM teaching and learning approach. This section also examines how technology and STEM are situated within, supported or threatened by other current innovations and approaches to teaching an integrated curriculum such as the Maker Space Movement and Play-based Learning.

*Contemporary Australian Primary Science Teacher Education* Angela Fitzgerald, Kimberley Pressick-Kilborn, Reece Mills, Linda Pfeiffer, James Deehan, 2024-09-06

This book provides an evidence-based response to how classroom readiness translates into the preparation of future teachers of science. It juxtaposes contemporary understanding of programming and practices in initial teacher education in an Australian context against international narratives. Through this, the book shifts the understanding of primary science education from a deficit model to one that critically examines challenges and contest what is happening in this space and why. It proposes problems of practice in primary science teacher education and then draws on these provocations to provide insights into possible solutions.
