Storytelling for Virtual Reality John Bucher, 2017-07-06 Storytelling for Virtual Reality serves as a bridge between students of new media and professionals working between the emerging world of VR technology and the art form of classical storytelling Rather than examining purely the technical the text focuses on the narrative and how stories can best be structured created and then told in virtual immersive spaces Author John Bucher examines the timeless principles of storytelling and how they are being applied transformed and transcended in Virtual Reality Interviews conversations and case studies with both pioneers and innovators in VR storytelling are featured including industry leaders at LucasFilm 20th Century Fox Oculus Insomniac Games and Google For more information about story Virtual Reality this book and its author please visit StorytellingforVR.com

Virtual Reality Tatjana Crossley, 2025-09-30 This book investigates how immersive environments across architecture art and media shape spatial perception cultural identity and the construction of reality It offers a spatial psychoanalytical reading of virtual reality VR examining how architecture and representation engage with the body sensorial experience and subjectivity Redefining VR as an experiential and spatial condition rather than simply a digital construct the book traces its lineage from ancient fresco rooms to contemporary digital landscapes Grounded in theoretical frameworks from psychoanalysis phenomenology and media theory it explores how immersive environments function as extensions of the body and reflect a collective identity Case studies from Pompeii to the Metaverse illustrate how architecture and representation shape our virtual experience Rather than viewing VR as a new phenomenon the book positions it as part of a longer trajectory in design and representation shaped by evolving tools and technologies It argues that the virtual spaces we create and the artifacts we choose to represent encode insights about identity memory and social conditions This book is written for theorists practitioners academics and students of architecture art and design It situates architectural practice within the unfolding discourse on virtuality identity and the cultural implications of space making

Paradata and Transparency in Virtual Heritage Anna Bentkowska-Kafel, Hugh Denard, 2016-05-13 Computer Generated Images CGIs are widely used and accepted in the world of entertainment but the use of the very same visualization techniques in academic research in the Arts and Humanities remains controversial The techniques and conceptual perspectives on heritage visualization are a subject of an ongoing interdisciplinary debate By demonstrating scholarly excellence and best technical practice in this area this volume is concerned with the challenge of providing intellectual transparency and accountability in visualization based historical research Addressing a range of cognitive and technological challenges the authors make a strong case for a wider recognition of three dimensional visualization as a constructive intellectual process and valid methodology for historical research and its communication Intellectual transparency of visualization based research the pervading theme of this volume is addressed from different perspectives reflecting the theory and practice of respective disciplines The contributors archaeologists cultural historians computer scientists and ICT practitioners emphasize the importance of reliable tools in particular documenting the process of interpretation of historical

material and hypotheses that arise in the course of research The discussion of this issue refers to all aspects of the intellectual content of visualization and is centred around the concept of paradata Paradata document interpretative processes so that a degree of reliability of visualization outcomes can be understood The disadvantages of not providing this kind of intellectual transparency in the communication of historical content may result in visual products that only convey a small percentage of the knowledge that they embody thus making research findings not susceptible to peer review and rendering them closed to further discussion It is argued therefore that paradata should be recorded alongside more tangible outcomes of research preferably as an integral part of virtual models and sustained beyond the life span of the technology that underpins visualization

Data Science Jianchao Zeng,Pinle Qin,Weipeng Jing,Xianhua Song,Zeguang Lu,2021-09-10 This two volume set CCIS 1451 and 1452 constitutes the refereed proceedings of the 7th International Conference of Pioneering Computer Scientists Engineers and Educators ICPCSEE 2021 held in Taiyuan China in September 2021 The 81 papers presented in these two volumes were carefully reviewed and selected from 256 submissions The papers are organized in topical sections on big data management and applications social media and recommendation systems infrastructure for data science basic theory and techniques for data science machine learning for data science multimedia data management and analysis social media and recommendation systems data security and privacy applications of data science education research methods and materials for data science and engineering research demo

Religion, Theology and the Human Sciences Richard H. Roberts,2002 Religion Theology and the Human Sciences explores the religious consequences of the so called end of history and triumph of capitalism as they have impinged upon key institutions of social reproduction in recent times The book explores the imposition of managerial modernity upon successive sectors of society and shows why many people today feel themselves to be oppressed by systems of management that seem to leave them no option but to conform Richard Roberts seeks to challenge and outflank such seamless oppressive modernity through reconfiguration of the religious and spiritual field
