Perspectives in Shape Analysis Michael Breuß, Alfred Bruckstein, Petros Maragos, Stefanie Wuhrer, 2016-09-30 This book presents recent advances in the field of shape analysis Written by experts in the fields of continuous scale shape analysis discrete shape analysis and sparsity and numerical computing who hail from different communities it provides a unique view of the topic from a broad range of perspectives Over the last decade it has become increasingly affordable to digitize shape information at high resolution Yet analyzing and processing this data remains challenging because of the large amount of data involved and because modern applications such as human computer interaction require real time processing Meeting these challenges requires interdisciplinary approaches that combine concepts from a variety of research areas including numerical computing differential geometry deformable shape modeling sparse data representation and machine learning On the algorithmic side many shape analysis tasks are modeled using partial differential equations which can be solved using tools from the field of numerical computing The fields of differential geometry and deformable shape modeling have recently begun to influence shape analysis methods Furthermore tools from the field of sparse representations which aim to describe input data using a compressible representation with respect to a set of carefully selected basic elements have the potential to significantly reduce the amount of data that needs to be processed in shape analysis tasks The related field of machine learning offers similar potential The goal of the Dagstuhl Seminar on New Perspectives in Shape Analysis held in February 2014 was to address these challenges with the help of the latest tools related to geometric algorithmic and numerical concepts and to bring together researchers at the forefront of shape analysis who can work together to identify open

problems and novel solutions The book resulting from this seminar will appeal to researchers in the field of shape analysis image and vision from those who want to become more familiar with the field to experts interested in learning about the latest advances Getting Back in Shape Bob Anderson,Bill Pearl,Ed Burke,2006-11-09 And special programs allow readers to exercise while at work or on the road The third edition of *Getting Back in Shape* includes a new section on running by Jeff Galloway Olympic athlete and author of the bestseller *Galloway's Book on Running* *Advanced Elastocaloric Cooling Devices Based on Shape Memory Alloy Films* Brüderlin, Florian,2022-11-15 Elastocaloric cooling is an emerging solid state cooling technology with the potential to provide environmentally friendly efficient cooling The elastocaloric effect in superelastic shape memory alloy films is used to develop advanced cooling devices for small scale applications Cascaded and parallelized devices are developed to increase device temperature span and cooling capacity The concepts are proven experimentally a maximum temperature span of 27 C is achieved in a cascaded device To Shape Our World for Good C.
