**Dynamic Thinking** Gregor Schöner, John P. Spencer, 2016 This book describes a new theoretical approach Dynamic Field Theory DFT that explains how people think and act

*Fundamental Neuroscience* Larry Squire, 2013 This

comprehensive textbook seeks to define the full scope of neuroscience Developed in accordance with results of extensive reviews the text is divided into seven integrated sections      **Sensation and Judgment** John C. Baird,2014-02-25

Psychophysical theory exists in two distinct forms one ascribes the explanation of phenomena and empirical laws to sensory processes Context effects arising through the use of particular methods are an unwanted nuisance whose influence must be eliminated so that one isolates the true sensory scale The other considers psychophysics only in terms of cognitive variables such as the judgment strategies induced by instructions and response biases Sensory factors play a minor role in cognitive approaches This work admits the validity of both forms of theory by arguing that the same empirical phenomena should be conceptualized in two alternative apparently contradictory ways This acceptance of opposites is necessary because some empirical phenomena are best explained in terms of sensory processes while others are best ascribed to central causes The complementarity theory stresses the mutually completing nature of two distinct models The first assigns importance to populations of sensory neurons acting in the aggregate and is formulated to deal with sensory effects The second assigns importance to judgment uncertainty and to the subject strategies induced by experimental procedures This model is formulated to explain context effects Throughout the text the exposition is interlaced with mathematics graphs and computer simulations designed to reveal the complementary nature of psychophysical explanations      **Human Factors in Simple**

**and Complex Systems** Robert W. Proctor,Trisha Van Zandt,2018-01-02 Recently there have been a number of advances in technology including in mobile devices globalization of companies display technologies and healthcare all of which require significant input and evaluation from human factors specialists Accordingly this textbook has been completely updated with some chapters folded into other chapters and new chapters added where needed The text continues to fill the need for a textbook that bridges the gap between the conceptual and empirical foundations of the field      **Olfactory Consciousness**

**across Disciplines** Benjamin D. Young,2015-03-05 Our sense of smell pervasively influences our most common behaviors and daily experience yet little is known about olfactory consciousness Over the past decade and a half research in both the fields of Consciousness Studies and Olfaction has blossomed however olfactory consciousness has received little to no attention The olfactory systems unique anatomy functional organization sensory processes and perceptual experiences offers a fecund area for exploring all aspects of consciousness as well as a external perspective for re examining the assumptions of contemporary theories of consciousness It has even been suggested that the olfactory system may represent the minimal neuroanatomy that is required for conscious processing Given the variegated nature of research on consciousness we include original papers concerning the nature of olfactory consciousness The scope of the special edition widely incorporates olfaction as it relates to Consciousness Awareness Attention Phenomenal or Access Consciousness and Qualia Research concerning olfaction and cross modal integration as it relates to conscious experience is also address As the initial foray into this uncharted area of research we include contributions from across all disciplines contributing to cognitive neuroscience

including neurobiology neurology psychology philosophy linguistics and computer sciences It is our hope that this Research Topic will serve as the impetus for future interdisciplinary research on olfaction and consciousness *Origins* Karl H. Pribram, 2018-10-24 The result of the second Appalachian conference on neurodynamics this volume focuses on the problem of order its origins evolution and future Central to this concern lies our understanding of time Both classical and quantum physics have developed their conceptions within a framework of time symmetry Divided into four major sections this book provides refreshingly new approaches to the problem of the evolution of order indicating the directions that need to be taken in subsequent conferences which will address learning and memory more directly addresses the issue of how information becomes transmitted in the nervous system shows how patterns are constructed at the synaptodendritic level of processing and how such pattern construction relates to image processing and deals with the control operations which operate on image processing to construct entities such as visual and auditory objects such as phonemes The aim of the conference was to bring together professionals to exchange ideas some were fairly worked out others were in their infancy As a result one of the most valuable aspects of the conference is that it fostered lasting interactive relationships among these leading researchers

**Farewell to Variables** Jaan Valsiner, 2023-02-01 This book presents a novel perspective on psychology's methodology moving it from quantification as a given imperative to science philosophical look at phenomena data relationship The idea for this volume emerged from inquiries into the history of psychology of the 18th 19th centuries where the developmental focus within German Naturphilosophie led philosophers to emphasize the dialectical nature of biological and psychological development The nature of the natural and social worlds is curvilinear and includes knot complexes that cannot be investigated in terms of the consensually accepted General Linear Model of the 20th century In this the new book continues the creative search for new forms of epistemological ways of thinking that was started in 2010 in the volume methodological thinking in psychology 60 years gone astray General Linear Model and turned into metaphoric complexes that acquire life of their own in psychologists thinking needs to be replaced by qualitative structural units of thinking about how human psychological organization can be presented
