Stability, Instability and Chaos Paul Glendinning, 1993

Stability, Instability and Chaos Paul Glendinning, 1994-11-25 By providing an introduction to nonlinear differential equations Dr Glendinning aims to equip the student with the mathematical know how needed to appreciate stability theory and bifurcations His approach is readable and covers material both old and new to undergraduate courses Included are treatments of the Poincaré Bendixson theorem the Hopf bifurcation and chaotic systems The unique treatment that is found in this book will prove to be an essential guide to stability and chaos

Semiconductor Lasers Junji Ohtsubo, 2007-10-24 Preface for the second edition Chaos research in laser physics especially in semiconductor lasers has developed further even after completion of the first edition of this book in the late summer of 2004 and it is still growing rapidly For example various forms of chaotic dynamics have been applied in newly developed semiconductor lasers such as in vertical cavity surface emitting semiconductor lasers and broad area semiconductor lasers Chaotic dynamics plays an important role in these new lasers even for their solitary oscillations and control of the dynamics is currently an important issue for practical applications other significant advance has been made in the area of chaotic optical secure communications Chaotic secure communications using existing public optical communications links have been tested and successful results have been obtained In this second edition I have filled in the gaps in the explanation of chaotic laser dynamics in the previous edition and I have also added several important topics that have been developed recently In particular a new chapter on laser stabilizations has been added and a number of misprints in the first edition have been corrected I believe this book will be of interest not only to researchers in the field of laser chaos but also to those working in nonlinear science and technology Hamamatsu Spring 2007 Junji Ohtsubo Preface The aim of this book is the description of the state of the art of chaos research in semiconductor lasers and their applications and the future perspective of this field

Deterministic Nonlinear Systems Vadim S. Anishchenko, Tatyana E. Vadivasova, Galina I. Strelkova, 2014-06-16 This text is a short yet complete course on nonlinear dynamics of deterministic systems Conceived as a modular set of 15 concise lectures it reflects the many years of teaching experience by the authors The lectures treat in turn the fundamental aspects of the theory of dynamical systems aspects of stability and bifurcations the theory of deterministic chaos and attractor dimensions as well as the elements of the theory of Poincaré recurrences Particular attention is paid to the analysis of the generation of periodic quasiperiodic and chaotic self sustained oscillations and to the issue of synchronization in such systems This book is aimed at graduate students and non

specialist researchers with a background in physics applied mathematics and engineering wishing to enter this exciting field of research

Chaotic Dynamics in Nonlinear Theory Lakshmi Burra, 2014-09-10 Using phase plane analysis findings from the theory of topological horseshoes and linked twist maps this book presents a novel method to prove the existence of chaotic dynamics In dynamical systems complex behavior in a map can be indicated by showing the existence of a Smale horseshoe like structure either for the map itself or its iterates This usually requires some assumptions about the map such as a diffeomorphism and some hyperbolicity conditions In this text less stringent definitions of a horseshoe have been suggested so as to reproduce some geometrical features typical of the Smale horseshoe while leaving out the hyperbolicity conditions associated with it This leads to the study of the so called topological horseshoes The presence of chaos like dynamics in a vertically driven planar pendulum a pendulum of variable length and in other more general related equations is also proved

Nonlinear Dynamics and Complexity Valentin Afraimovich, Albert C. J. Luo, Xilin Fu, 2013-11-22 This important collection presents recent advances in nonlinear dynamics including analytical solutions chaos in Hamiltonian systems time delay uncertainty and bio network dynamics Nonlinear Dynamics and Complexity equips readers to appreciate this increasingly main stream approach to understanding complex phenomena in nonlinear systems as they are examined in a broad array of disciplines The book facilitates a better understanding of the mechanisms and phenomena in nonlinear dynamics and develops the corresponding mathematical theory to apply nonlinear design to practical engineering

Self-Organization and the City Juval Portugali, 2012-12-06 Cities first came into existence more than five thousand years ago How to deal with these partly fascinating partly frightening creatures of mankind both practically and intellectually concerns all of us and in particular presents areal challenge to city planners Each historical epoch has had its own particular attitudes associated with the Zeitgeist Accordingly the planning and steering of cities were based on quite different criteria But in spite of these differences the concept of planning and steering was and still is the cornerstone of our dealing with cities Nevertheless the planner s dilemma is becoming more and more visible cities and megacities seem to be unplannable In this book Juval Portugali introduces a new idea Cities are self organizing systems To substantiate his revolutionary concept he uses several interlinked methods On the one hand and to my own delight he employs in his arguments theoretical tools developed in the interdisciplinary field of synergetics On the other hand jointly with his co workers he has performed detailed model calculations on cellular nets It has been a great pleasure and a wonderful experience for me to discuss these concepts with Juval Portugali over a number of years I was repeatedly and deeply impressed by the way he established profound and often surprising links to other fields of science

Nonlinear and Nonequilibrium Dynamics of

Quantum-Dot Optoelectronic Devices Benjamin Lingnau, 2015-12-14 This thesis sheds light on the unique dynamics of optoelectronic devices based on semiconductor quantum dots The complex scattering processes involved in filling the optically active quantum dot states and the presence of charge carrier nonequilibrium conditions are identified as sources for

the distinct dynamical behavior of quantum dot based devices Comprehensive theoretical models which allow for an accurate description of such devices are presented and applied to recent experimental observations The low sensitivity of quantum dot lasers to optical perturbations is directly attributed to their unique charge carrier dynamics and amplitude phase coupling which is found not to be accurately described by conventional approaches The potential of quantum dot semiconductor optical amplifiers for novel applications such as simultaneous multi state amplification ultra wide wavelength conversion and coherent pulse shaping is investigated The scattering mechanisms and the unique electronic structure of semiconductor quantum dots are found to make such devices prime candidates for the implementation of next generation optoelectronic applications which could significantly simplify optical telecommunication networks and open up novel high speed data transmission schemes
