Dynamics of Stress Mortimer H. Appley, Richard A. Trumbull, 2012-12-06 It was our privilege some twenty years ago to assemble a group of Canadian and American investigators to examine the status of research in the then newly burgeoning field of psychological stress Appley Trumbull 1967 As noted in Chapter 1 of the present volume there has been rapid development of the area since then The conference on which the current volume is based was designed to do three things 1 to further update the field 2 to bring European and other perspectives to the subject and 3 to focus on the status of theory of stress We believe the reader will agree that all three objectives were accomplished though in so vast and active a field one can never be totally satisfied The authors included in this volume are among the

leading investigators in the field. They represent active research centers and programs in Austria, East and West Germany, Great Britain, Israel, Sweden, and the United States. Their chapters make contributions to stress theory and methodology, inform us meaningfully of the perspectives of the various research programs they represent, and provide collectively a description of the dynamics of the stress process as currently emerging.

Performance Under Stress James Szalma, Peter A. Hancock, 2018-10-09. The world is a dangerous place, and recent events have served to make it less safe. There are many arenas of conflict, and even combat across the world. Such situations are the quintessential expression of stress: you stand in imminent danger and live with the knowledge that you may be attacked, injured, or even killed at any moment. How do people perform under these conditions? How do they keep a heightened level of vigilance when nothing may happen in their immediate location for weeks or even months? What happens when the bullets actually start flying? How is it you distinguish friend from foe and each from innocent bystanders when in immediate peril of your life? Can we design technology to help people make good decisions in these ultimately hazardous situations? To what degree does your membership in a team act to dissipate these particular effects? Can we generate sufficiently stressful field exercises to simulate these conditions, and can we train and/or select those most able to withstand such adverse conditions? How will the next generation of servicemen deal with these inherent problems? These are the sorts of questions that *Performance Under Stress* addresses. This book is derived largely from a multiple-year, multiple-university initiative (MURI) on stress and soldier performance on the modern electronic battlefield. It involved leading researchers from many institutions who have brought their individual expertise to bear on these crucial contemporary concerns. United by a common research framework, these groups attacked the issue from different methodological and conceptual approaches, ranging from traditional laboratory modeling and experimentation to realistic simulations, from involved field exercises to personal experiences of actual combat conditions. The insights generated have been distilled and presented as a benchmark of current understanding and provide future directions for research in this arena. Although this work focuses on soldier stress and soldier performance, the principles that are derived extend well beyond this single application. Their findings can be applied to people facing the demands of the business world or research as much as to those who meet life-or-death situations such as homeland security, first responders, and law enforcement personnel.
