Skilled maintenance work at British Telecom: findings from the Social Change and Economic Life Research Initiative

Roger Penn

Here the author examines the relationship of technical change and job skills amongst maintenance workers in telecommunications in Britain. It demonstrates that there are significant variations within different areas of such maintenance work and strongly challenges the notion that such maintenance work is subject to a generic process of deskilling in the present era.

It is clear that any reliable account of variations in work situations presupposes detailed knowledge of working conditions themselves. Thirdly, contemporary debates about the evolution of skills, whether they are concerned to reformulate census occupational categories for the 1991 Census of Population or to reorganize the national system of training provision, cannot proceed satisfactorily without detailed examinations of the skilled content of jobs themselves. There is, indeed, a suspicion that many economic sociologists
