The Skyscraper Bioclimatically Considered Ken Yeang, 1996 An innovative study of this building type *The Skyscraper Bioclimatically Considered* Ken Yeang, 1996 An innovative study of this building type Dimensions of Sustainability Andrew Scott, MIT, 2003-09-02 This illustrated book gives a comprehensive view of _ contemporary ideas innovations and emerging attitudes to sustainability that emanated from the MIT symposium 16 leading contributors with demonstrable track records in architectural practice engineering and academia give their insights into the way we need to think about architecture in the future in order to work with the environment instead of against it Supported by details that relate to specific design or research projects they clearly suggest a variety of potential directions to follow to bring environmentalism into the mainstream of architectural discourse The edited summary of twelve key presentations at an International Design Symposium held at MIT This book presents an important collection of contributions from key designers with a track record in the field of environmentally conscious buildings Their contributions respond to a need for a more holistic view on environmentalism focusing on cultural and social levels as well as technical issues to broaden the debate on sustainable architecture This book will appeal to a wide range of professionals in the built environment increasingly concerned with sustainable design **Creating Regenerative Cities** Herbert Girardet, 2014-09-19 Large modern cities have effectively declared their independence from nature But while they take up only three percent of the world's land surface their ecological footprints actually cover the entire globe Humanity is building an urban future yet urban resource use is threatening the future of humanity and the natural world To meet the aspirations of city people in both developing and developed countries bold new initiatives are needed Modern cities are an astonishing human achievement As centres of innovation they are humanity's cultural playgrounds Their communication and transport systems have developed a global reach They are attractive to investors because they can offer a vast variety of services at comparatively low per capita costs But are they viable as ecological systems The planning of new cities as well as the retrofit of existing cities needs to undergo a profound paradigm shift Mere sustainable development is not enough To be compatible with natural systems cities need to move away from linear systems of resource use and learn to operate as closed loop circular systems To ensure their long term future they need to develop an environmentally enhancing restorative relationship between themselves and the natural systems on which they still depend *Creating Regenerative Cities* is a concise solution oriented manual for creating regenerative urbanisation A wide range of technical management and policy solutions already exist but implementation has been too slow and too little in large part because the kinds of holistic approaches needed are still unfamiliar to fragmented and process driven urban policy making and governance Herbert Girardet's 30 years experience as an ecologist thinker film maker and consultant working around the world has created this unique combination of tried and tested best practices and policies which outlines the fundamental shifts needed in the way we think about our cities *Architecture, Technology and*

Process Chris Abel, 2007-03-30 This new selection of essays follows Chris Abel's previous best selling collection *Architecture and Identity* Drawing upon a wide range of knowledge and disciplines the author argues that underlying technological changes in the process of architectural production are fundamental changes in the way we think about machines and the world we live in Key topics include new patterns of urbanism in the fast growing cities of Asia Pacific metaphorical extensions of mind and body in cyberspace the divergent European and North American values shaping Sir Norman Foster's and Frank Gehry's work and the collaborative work methods and technologies creating the adaptable design practices of today **Big**

Data Science and Analytics for Smart Sustainable Urbanism Simon Elias Bibri, 2019-05-30 We are living at the dawn of what has been termed the fourth paradigm of science a scientific revolution that is marked by both the emergence of big data science and analytics and by the increasing adoption of the underlying technologies in scientific and scholarly research practices Everything about science development or knowledge production is fundamentally changing thanks to the ever increasing deluge of data This is the primary fuel of the new age which powerful computational processes or analytics algorithms are using to generate valuable knowledge for enhanced decision making and deep insights pertaining to a wide variety of practical uses and applications This book addresses the complex interplay of the scientific technological and social dimensions of the city and what it entails in terms of the systemic implications for smart sustainable urbanism In concrete terms it explores the interdisciplinary and transdisciplinary field of smart sustainable urbanism and the unprecedented paradigmatic shifts and practical advances it is undergoing in light of big data science and analytics This new era of science and technology embodies an unprecedentedly transformative and constitutive power manifested not only in the form of revolutionizing science and transforming knowledge but also in advancing social practices producing new discourses catalyzing major shifts and fostering societal transitions Of particular relevance it is instigating a massive change in the way both smart cities and sustainable cities are studied and understood and in how they are planned designed operated managed and governed in the face of urbanization This relates to what has been dubbed data driven smart sustainable urbanism an emerging approach based on a computational understanding of city systems and processes that reduces urban life to logical and algorithmic rules and procedures while also harnessing urban big data to provide a more holistic and integrated view or synoptic intelligence of the city This is increasingly being directed towards improving advancing and maintaining the contribution of both sustainable cities and smart cities to the goals of sustainable development This timely and multifaceted book is aimed at a broad readership As such it will appeal to urban scientists data scientists urbanists planners engineers designers policymakers philosophers of science and futurists as well as all readers interested in an overview of the pivotal role of big data science and analytics in advancing every academic discipline and social practice concerned with data intensive science and its application particularly in relation to sustainability **Architecture and Globalisation in the**

Persian Gulf Region Nasser Gholzari, 2016-04-15 This is the first book ever to examine the architecture and urbanism of the

Persian Gulf as a complete entity dealing equally with conditions on the eastern Iranian shoreline as in Arabic countries on the western side By inviting a range of architects and scholars to write about historical and contemporary influences on 14 cities along both Gulf coastlines the book traces the changes in architecture and human settlement in relation to environmental factors and particularity of place It provides an innovative contribution to the study of architecture and globalisation through a detailed investigation of this particular region investigating how buildings and cities are being shaped as a result A set of thematic essays at the end offer important insights into issues of globalisation urbanism and environmental design drawing from the experience of the Persian Gulf The outcome is a unique record of the Gulf in the early 21st century at a point when global capitalism is making major inroads and yet questions of architectural design climate change ecological sustainability cultural identity and so called Facebook Democracy are likewise shaking up the Middle Eastern region The book thus offers a fresh reading of the architecture and urbanism of a fascinating and often contradictory region while also showing how globalisation can be analysed in a more engaged and integrated manner

Architecture & Design versus Consumerism Ann Thorpe, 2012-06-14 The mentality that consumerism and economic growth are cure alls is one of the biggest obstacles to real sustainability but any change seems impossible unthinkable Our contemporary paradox finds us relying for our well being on consumer driven economic growth that we actually can't afford not in environmental economic or social terms Although architecture and design have long been seen as engines for consumerism and growth increasing numbers of designers are concerned about the problems resulting from growth But designers face a paradox of their own in scenarios of sustainable consumption where people consume or build significantly less what will be left for designers to do This book informed by recent research into the viability of a steady state economy sets an agenda for addressing the designer's paradox of sustainable consumption The agenda includes ways that architecture and design can help transition us towards a new kind of economy that prioritizes real wellbeing rather than economic growth Packed with examples and illustrations the book argues that taking action or activism is an important but so far underexplored way for architects and designers to confront consumerism The first chapters explore how economic growth and consumerism shape and are shaped by the professions of architecture product and landscape design and how we can understand the problem of consumerism as four main challenges that designers are already addressing The book maps out the main issues surrounding the development of metrics that designers and others can use to measure wellbeing instead of simply measuring economic growth The second half of the book looks at how design activism works and its connection to growth and consumerist issues These chapters examine how activist practices are financed highlight five specific methods that designers use in working for social change and investigate the power of these methods The book concludes with a consideration of what design's role might be in a post growth society

William Siew Wai Lim,2005 The author having lectured widely on subjects relating to architecture and urbanism around the region has in depth knowledge of Asian cities and their urban and architectural conditions The book provides an alternative urbanism addressing the unprecedented urban explosion in the emerging non Western economies and the increasingly prevalent post modern conditions of pluralistic culture tolerance of differences fragmentation and chaotic order The book presents a radical theory of Asian ethical urbanism which transcends and discards the constraints and rigidity of modernist planning and situates its critical substances within the challenging conditions of Asian cities today **Smart Sustainable**

Cities of the Future Simon Elias Bibri,2018-02-24 This book is intended to help explore the field of smart sustainable cities in its complexity heterogeneity and breadth the many faces of a topical subject of major importance for the future that encompasses so much of modern urban life in an increasingly computerized and urbanized world Indeed sustainable urban development is currently at the center of debate in light of several ICT visions becoming achievable and deployable

computing paradigms and shaping the way cities will evolve in the future and thus tackle complex challenges This book integrates computer science data science complexity science sustainability science system thinking and urban planning and design As such it contains innovative computer based and data analytic research on smart sustainable cities as complex and dynamic systems It provides applied theoretical contributions fostering a better understanding of such systems and the synergistic relationships between the underlying physical and informational landscapes It offers contributions pertaining to the ongoing development of computer based and data science technologies for the processing analysis management modeling and simulation of big and context data and the associated applicability to urban systems that will advance different aspects of sustainability This book seeks to explicitly bring together the smart city and sustainable city endeavors and to focus on big data analytics and context aware computing specifically In doing so it amalgamates the design concepts and planning principles of sustainable urban forms with the novel applications of ICT of ubiquitous computing to primarily advance sustainability Its strength lies in combining big data and context aware technologies and their novel applications for the sheer purpose of harnessing and leveraging the disruptive and synergetic effects of ICT on forms of city planning that are required for future forms of sustainable development This is because the effects of such technologies reinforce one another as to their efforts for transforming urban life in a sustainable way by integrating data centric and context aware solutions for enhancing urban systems and facilitating coordination among urban domains This timely and comprehensive book is aimed at a wide audience across science academia industry and policymaking It provides the necessary material to inform relevant research communities of the state of the art research and the latest development in the area of smart sustainable urban development as well as a valuable reference for planners designers strategists and ICT experts who are working towards the development and implementation of smart sustainable cities based on big data analytics and context aware computing

Advanced Environmental Wind Engineering Yukio Tamura,Ryuichiro Yoshie,2016-03-25 This book is highly suitable for advanced courses as it introduces state of the art information and the latest research results on diverse problems in the environmental wind engineering field The topics include indoor natural ventilation pedestrian wind environment pollutant dispersion urban heat island phenomena urban ventilation indoor outdoor thermal comfort and experimental numerical techniques to analyze those issues Winds have a great influence on the outdoor environment especially in urban areas Problems that they cause can be attributed to either strong wind or weak wind issues Strong winds around high rise buildings can bring about unpleasant and in some cases dangerous situations for people in the outdoor environment On the other hand weak wind conditions can also cause problems such as air pollution and heat island phenomena in urban areas Winds enhance urban ventilation and reduce those problems They also enhance natural ventilation in buildings which can reduce the energy consumption of mechanical ventilation fans and air conditioners for cooling Moderate winds improve human thermal comfort in both indoor and outdoor environments in summer Environmental wind engineering associated
