Stream Of Consciousness Unity And Continuity In Conscious Experience:

Stream of Consciousness Barry Dainton, 2000 *Stream of Consciousness* will interest anyone concerned with the current debates on consciousness in philosophy psychology and neuroscience **BOOK JACKET** **Self and Other** Dan Zahavi, 2014-11-27 Can you be a self on your own or only together with others Is selfhood a built in feature of experience or rather socially constructed How do we at all come to understand others Does empathy amount to and allow for a distinct experiential acquaintance with others and if so what does that tell us about the nature of selfhood and social cognition Does a strong emphasis on the first personal character of consciousness prohibit a satisfactory account of intersubjectivity or is the former rather a necessary requirement for the latter Engaging with debates and findings in classical phenomenology in philosophy of mind and in various empirical disciplines Dan Zahavi's new book *Self and Other* offers answers to these questions Discussing such diverse topics as self consciousness phenomenal externalism mindless coping mirror self recognition autism theory of mind embodied simulation joint attention shame time consciousness embodiment narrativity self disorders expressivity and Buddhist no self accounts Zahavi argues that any theory of consciousness that wishes to take the subjective dimension of our experiential life seriously must endorse a minimalist notion of self At the same time however he also contends that an adequate account of the self has to recognize its multifaceted character and that various complementary accounts must be integrated if we are to do justice to its complexity Thus while arguing that the most fundamental level of selfhood is not socially constructed and not constitutively dependent upon others Zahavi also acknowledges that there are dimensions of the self and types of self experience that are other mediated The final part of the book exemplifies this claim through a close analysis of shame **The Oxford Companion to Consciousness** Tim Bayne, Axel Cleeremans, Patrick Wilken, 2009-06-04 Consciousness is undoubtedly one of the last remaining scientific mysteries and hence one of the greatest contemporary scientific challenges How does the brain's activity result in the rich phenomenology that characterizes our waking life Are animals conscious Why did consciousness evolve How does science proceed to answer such questions Can we define what consciousness is Can we measure it Can we use experimental results to further our understanding of disorders of consciousness such as those seen in schizophrenia delirium or altered states of consciousness These questions are at the heart of contemporary research in the domain Answering them requires a fundamentally interdisciplinary approach that engages not only philosophers but also neuroscientists and psychologists in a joint effort to develop novel approaches that reflect both the stunning recent advances in imaging methods as well as the continuing refinement of our concepts of consciousness In this light the *Oxford Companion to Consciousness* is the most complete authoritative survey of contemporary research on consciousness Five years in the making and including over 250 concise entries written by leaders in the field the volume covers both fundamental knowledge as well as more recent advances in this rapidly changing domain Structured as an easy to use dictionary and extensively cross referenced the Companion offers

contributions from philosophy of mind to neuroscience from experimental psychology to clinical findings so reflecting the profoundly interdisciplinary nature of the domain Particular care has been taken to ensure that each of the entries is accessible to the general reader and that the overall volume represents a comprehensive snapshot of the contemporary study of consciousness The result is a unique compendium that will prove indispensable to anyone interested in consciousness from beginning students wishing to clarify a concept to professional consciousness researchers looking for the best

characterization of a particular phenomenon **Cognitive Phenomenology** Elijah Chudnoff,2015-04-10 Phenomenology is about subjective aspects of the mind such as the conscious states associated with vision and touch and the conscious states associated with emotions and moods such as feelings of elation or sadness These states have a distinctive first person feel to them called their phenomenal character In this respect they are often taken to be radically different from mental states and processes associated with thought This is the first book to fully question this orthodoxy and explore the prospects of cognitive phenomenology applying phenomenology to the study of thought and cognition Does cognition have its own phenomenal character Can introspection tell us either way If consciousness flows in an unbroken stream as William James argued how might a punctuated sequence of thoughts fit into it Elijah Chudnoff begins with a clarification of the nature of the debate about cognitive phenomenology and the network of concepts and theses that are involved in it He then examines the following topics introspection and knowledge of our own thoughts phenomenal contrast arguments the value of consciousness the temporal structure of experience the holistic character of experience and the interdependence of sensory and cognitive states the relationship between phenomenal character and mental representation Including chapter summaries annotated further reading and a glossary this book is essential reading for anyone seeking a clear and informative introduction to and assessment of cognitive phenomenology whether philosophy student or advanced researcher It will also be valuable reading for those in related subjects such as philosophy of mind philosophy of psychology and epistemology

Internalism and the Limits of Twin Earth Scenarios Jan Almäng,2024-12-20 Internalism and the Limits of Twin Earth Scenarios A Study of Phenomenal Intentionalism explores visual perceptual experiences and whether or not visual intentional content is internal or external Coming from the standpoint of phenomenal intentionalism this book assumes that phenomenal consciousness is internal to the subject of a perceptual experience Jan Almäng argues that the structure of the phenomenal character of visual experiences sets certain limits with respect to whether Twin Earth thought experiments can be successful suggesting that while Twin Earth thought experiments are successful for entities such as colours they fail with respect to more complex geometrical structures Because visual perceptual experiences represent in an analogue manner this prevents certain kinds of Twin Earth scenarios from being successful Almäng then argues that some phenomenal intentional content is internal If visual experiences have a perspectival structure that this by necessity means that they are intentional

The Oxford Handbook of Philosophy and Psychiatry KWM Fulford,Martin Davies,Richard Gipps,George Graham,John

Sadler, Giovanni Stanghellini, Tim Thornton, 2013-07-04 Philosophy has much to offer psychiatry not least regarding ethical issues but also issues regarding the mind identity values and volition This has become only more important as we have witnessed the growth and power of the pharmaceutical industry accompanied by developments in the neurosciences However too few practising psychiatrists are familiar with the literature in this area The Oxford Handbook of Philosophy and Psychiatry offers the most comprehensive reference resource for this area ever published It assembles challenging and insightful contributions from key philosophers and others to the interactive fields of philosophy and psychiatry Each contributions is original stimulating thorough and clearly and engagingly written with no potentially significant philosophical stone left unturned Broad in scope the book includes coverage of several areas of philosophy including philosophy of mind science and ethics For philosophers and psychiatrists The Oxford Handbook of Philosophy and Psychiatry is a landmark publication in the field one that will be of value to both students and researchers in this rapidly growing area

Narrative and Ethical Understanding Garry L. Hagberg, 2024-07-05 There has been a steady stream of articles written on the relations between ethics and the interpretation of literature but there remains a need for a book that both introduces and significantly contributes to the field particularly one that shows how we can think more openly and creatively about the multiform powers of ethical narrative by considering ethically significant literature This volume offers an analytically acute and culturally rich way of understanding how it is that we can productively think philosophically about the narrative structures that describe our ethical lives and what kind of distinctive conceptual and in some cases personal progress we can make by doing so Given the extremely widespread interest in ethical issues this volume will strike resonant chords far and wide on arrival while offering something new in bringing together the study of long form narrative the language of moral psychology and detailed literary case studies Given the vast expansion of narrative studies in recent years the time for just such a volume is right

Phenomenology Shaun Gallagher, 2022-08-23 With a focus on phenomenological methods this new edition of Shaun Gallagher's highly regarded textbook provides a comprehensive introduction to phenomenology considered as a philosophical and interdisciplinary practice Phenomenology 2e encompasses both the classic 20th century explications of phenomenology as well as recent developments in the practical and scientific uses of phenomenology Key features Explores debates about naturalizing phenomenology and reviews recent extensions of phenomenological methodology Relates the phenomenological analysis of intentionality to discussions of enactive perception Includes a discussion of the phenomenology of performance and a new chapter on critical phenomenology Examines specialized topics in phenomenology including Husserl's concept of hyletic data embodiment time consciousness action intersubjectivity and self consciousness Each chapter concludes with suggestions for further reading This book is essential reading for all undergraduate and graduate philosophy students taking courses in phenomenology It is also ideal for use on cognitive science modules that incorporate a phenomenological perspective

The Philosophy of Psychiatry Jennifer Radden, 2004 This is a comprehensive volume of essays by leading

thinkers that explores the newly emerging interdisciplinary field of the philosophy of psychiatry **What Is the Present?**
Michael North, 2018-06-05 A provocative new look at concepts of the present their connection to ideas about time and their effect on literature art and culture The problem of the present what it is and what it means is one that has vexed generations of thinkers and artists Because modernity places so much value on the present many critics argue that people today spend far too much time in the here and now but how can we tell without first knowing what the here and now actually is What Is the Present takes a provocative new look at this moment in time that remains a mystery even though it is always with us Michael North tackles puzzles that have preoccupied philosophy neuroscience psychology history and aesthetic theory and examines the complex role of the present in painting fiction and film He engages with a range of thinkers from Aristotle and Augustine to William James and Henri Bergson He draws illuminating examples from artists such as Fra Angelico and Richard McGuire filmmakers like D W Griffith and Christopher Nolan and novelists such as Elizabeth Bowen and Willa Cather North offers a critical analysis of previous models of the present from the experiential present to the historical period we call the contemporary He argues that the present is not a cosmological or experiential fact but a metaphor a figurative relationship with the whole of time Presenting an entirely new conception of the temporal mystery Georg Lukacs called the unexplained instant What Is the Present explores how the arts have traditionally represented the present and also how artists have offered radical alternatives to that tradition
