Stretching The Imagination Representation And Transformation In Mental Imagery:

Stretching the Imagination Cesare Cornoldi, 1996 This is the first volume in the Counterpoints Series which explores the issues being debated in psychology child development linguistics and neuroscience Each volume consists of the presentation of three or four extensive chapters by researchers representing key points of view on the issue This text examines one of the liveliest areas of debate in psychology today the relationship between perception and mental imagery A variety of recent studies have pointed to the existence of a strong relationship between memory and mental representation while others have shown that images are open to reinterpretation and manipulation and are therefore not merely static impressions or mental representations of memories Three core chapters by researchers in the midst of this debate Maria Brandimonte Geir Kaufmann and Dan Reisberg make up the central portion of this text The first chapter is a historical overview of the problem as well as a review of the research in psychology and the argument as it has developed in related fields such as philosophy and artificial intelligence The last chapter pulls together all of the positions and points to new areas of research which may help uncover an explanation for the apparent contradictions in the research Students and researchers in psychology and cognitive psychology will benefit from this comprehensive look at this heated debate **Stretching the Imagination** Cesare Cornoldi, 1996 *Imagery in Working Memory and in Mental Discovery* Tore Helstrup, Robert H. Logie, 1999 A special issue of European journal of cognitive psychology **The Cambridge Handbook of Visuospatial Thinking** Priti Shah, Akira Miyake, 2005-07-25 The ability to navigate across town comprehend an animated display of the functioning of the human heart view complex multivariate data on a company's website or to read an architectural blueprint and form a three dimensional mental picture of a house are all tasks involving visuospatial thinking The field of visuospatial thinking is a relatively diverse interdisciplinary research enterprise An understanding of visuospatial thinking and in particular how people represent and process visual and spatial information is relevant not only to cognitive psychology but also education geography architecture medicine design computer science artificial intelligence semiotics and animal cognition The goal of this book first published in 2005 is to present a broad overview of research on visuospatial thinking that can be used by researchers as well as students interested in this topic in both basic research and applied naturalistic contexts *Imagery, Language and Visuo-Spatial Thinking* Michel Denis, Robert Logie, Cesare Cornoldi, Manuel de Vega, Johannes Engelkamp, 2012-10-12 *Imagery Language and Visuo Spatial Thinking* discusses the remarkable human ability to use mental imagery in everyday life from helping plan actions and routes to aiding creative thinking from making sense of and remembering our immediate environment to generating pictures in our minds from verbal descriptions of scenes or people The book also considers the important theme of how individuals differ in their ability to use imagery With contributions from leading researchers in the field this book will be of interest to advanced undergraduates postgraduates and researchers in cognitive psychology cognitive science and cognitive neuropsychology *The Routledge Handbook of*

Philosophy of Imagination Amy Kind, 2016-01-22 Imagination occupies a central place in philosophy going back to Aristotle. However, following a period of relative neglect, there has been an explosion of interest in imagination in the past two decades as philosophers examine the role of imagination in debates about the mind and cognition, aesthetics and ethics, as well as epistemology, science, and mathematics. This outstanding Handbook contains over thirty specially commissioned chapters by leading philosophers, organised into six clear sections examining the most important aspects of the philosophy of imagination, including: Imagination in historical context; Aristotle, Descartes, Hume, Kant, Husserl, and Sartre; What is imagination? The relation between imagination and mental imagery; imagination contrasted with perception, memory, and dreaming; Imagination in aesthetics; imagination and our engagement with music, art, and fiction; the problems of fictional emotions and imaginative resistance; Imagination in philosophy of mind and cognitive science; imagination and creativity; the self, action, child development, and animal cognition; Imagination in ethics and political philosophy, including the concept of moral imagination and empathy; Imagination in epistemology and philosophy of science, including learning, thought experiments, scientific modelling, and mathematics. The Routledge Handbook of Philosophy of Imagination is essential reading for students and researchers in philosophy of mind and psychology, aesthetics, and ethics. It will also be a valuable resource for those in related disciplines such as psychology and art.

The Oxford Handbook of the Development of Imagination Marjorie Taylor, 2013-04-02 Children are widely celebrated for their imaginations, but developmental research on this topic has often been fragmented or narrowly focused on fantasy. However, there is growing appreciation for the role that imagination plays in cognitive and emotional development, as well as its link with children's understanding of the real world. With their imaginations, children mentally transcend time, place, and/or circumstance to think about what might have been, plan and anticipate the future, create fictional relationships and worlds, and consider alternatives to the actual experiences of their lives. The Oxford Handbook of the Development of Imagination provides a comprehensive overview of this broad new perspective by bringing together leading researchers whose findings are moving the study of imagination from the margins of mainstream psychology to a central role in current efforts to understand human thought. The topics covered include: fantasy, reality, distinctions, pretend, play, magical thinking, narrative, anthropomorphism, counterfactual reasoning, mental time travel, creativity, paracosms, imaginary companions, imagination in non-human animals, the evolution of imagination, autism, dissociation, and the capacity to derive real-life resilience from imaginative experiences. Many of the chapters include discussions of the educational, clinical, and legal implications of the research findings, and special attention is given to suggestions for future research.

Imagery and Spatial Cognition Tomaso Vecchi, Gabriella Bottini, 2006-01-01 The relationships between perception and imagery, imagery and spatial processes, memory and action. These are the main themes of this text. The interest of experimental psychology and cognitive neuroscience on imagery and spatial cognition is remarkably increased in the last decades. Different areas of research contribute to the clarification of the multiple cognitive

processes subserving spatial perception and exploration and to the definition of the neurophysiological mechanisms underpinning these cognitive functions The aim of this book is to provide the reader post graduate students as well as experts with a complete overview of this field of research It illustrates the way how brain behaviour and cognition interact in normal and pathological subjects in perceiving representing and exploring space Series B The Pleasure of Pictures Jérôme Pelletier,Alberto Voltolini,2018-07-17 The general aim of this volume is to investigate the nature of the relation between pictorial experience and aesthetic appreciation In particular it is concerned with the character and intimacy of this relationship is there a mere causal connection between pictorial experience and aesthetic appreciation or are the two related constitutively associated with one another The essays in the book's first section investigate important conceptual issues related to the pictorial experience of paintings In Section II the essays discuss the notion of styles techniques agency and facture and also take into account the experience of photographic and cinematic pictures The Pleasure of Pictures goes substantially beyond current debates in the philosophy of depiction to launch a new area of reflection in philosophical aesthetics **The Storyteller's Memory Palace** Hanne Bewernick,2010 Storytelling and remembering rely on similar practices they both arrange images in an ordered structure A story is initially memorised by the author in a mental structure which is transferred to the page via the author's choice of location organisation and imagery An interpretation that emphasises these features enhances the natural capacity for comprehension by mimicking the memory process This study describes and uncovers memory systems including the memory palace and the memory journey in medieval texts The ancient memory techniques are compared to cognitive psychology and used to interpret four modern novels A practical method of interpretation is devised which provides the reader with direct access to a story by opening the door into the storyteller's memory palace
