Disease and Demography in Colonial Burma Judith L. Richell, 2006-12-01 Disease and Demography in Colonial Burma is an examination of the factors that shaped demographic change in Burma between 1852 and 1941 Despite increasing contemporary interest in the historical demography of the non European world there has been little detailed exploration of Burma's extensive but problematic population records Judith Richell developed a demographic framework for Burma by analysing late nineteenth century and early twentieth century census data and used this information to analyse population change within the country Colonial Burma experienced relatively high rates of mortality and Richell related this phenomenon to nutrition the development of sanitary and health services the impact of migration from India and agricultural change She also assessed infant child and adult mortality the incidence of endemic diseases such as beri beri and malaria and outbreaks of plague and cholera as well as the influenza pandemic of 1918 The data the author collected and her discussion of these topics provide an exceptionally valuable resource for scholars interested in Burma demography and public health in Southeast Asia Book jacket

Tuberculosis Control and Institutional Change in Shanghai, 1911-2011 Rachel S. Core, 2023-08-21 This volume is the first book length monograph on the most widespread and deadly infectious disease in China both historically and today tuberculosis TB Weaving together interviews with data from periodicals and local archives in Shanghai Rachel Core examines the rise and fall of TB control in China from the 1950s to the 1990s The answer to this Core argues lies in the socialist work unit system Under the work unit system the vast majority of people had guaranteed employment a host of benefits tied to their workplace and there was little mobility factors that made the delivery of medical and public health services possible in both urban and rural areas The dismantling of work units amid wider market reforms in the 1980s and 1990s led to the rise of temporary and casual employment and a huge migrant worker population with little access to health care creating new challenges in TB control This study of Shanghai has major implications for institutional research on disease control It will provide valuable lessons for historians social scientists public health specialists and many others working on public health infrastructure on both the national and
