Taps For Space:

Port Strategy for Sustainable Development Elvira Haezendonck, 2021-03-23 Today most large port hubs include the circular economy transformation challenge together with smart digitalization and Internet of Things IoT in their strategic priorities However many ports do not seem to have progressed beyond incremental small scale sustainable innovations or the support of rather fragmented sustainability initiatives The challenges are complex since ports do not only have to reconsider their own core activities but also their role in the supply chain of shippers to lift themselves out of the linear lock in Opportunities are also created and port authorities and businesses need to embrace circular learning and turn these projects into sustainable business models This strategic change or refocus requires new insights into innovative governance and business frameworks the link between strategy and commercially viable business models systems innovation intensified stakeholder collaboration and co creation altered traffic segments and hinterland focus amongst others These Special Issue articles address current CE transition concerns salient to port strategists and managers such as first strategic changes towards circular ports building awareness on the importance of sustainability data and available space and how port authorities can develop circular business models

MIMO Wireless Networks Bruno Clerckx, Claude Oestges, 2013-01-23 This book is unique in presenting channels techniques and standards for the next generation of MIMO wireless networks Through a unified framework it emphasizes how propagation mechanisms impact the system performance under realistic power constraints Combining a solid mathematical analysis with a physical and intuitive approach to space time signal processing the book progressively derives innovative designs for space time coding and precoding as well as multi user and multi cell techniques taking into consideration that MIMO channels are often far from ideal Reflecting developments since the first edition was published this book has been thoroughly revised and now includes new sections and five new chapters respectively dealing with receiver design multi user MIMO multi cell MIMO MIMO implementation in standards and MIMO system level evaluation Extended introduction to multi dimensional propagation including polarization aspects Detailed and comparative description of physical models and analytical representations of single and multi link MIMO channels covering the latest standardized models Thorough overview of space time coding techniques covering both classical and more recent schemes under information theory and error probability perspectives Intuitive illustration of how real world propagation affects the capacity and the error performance of MIMO transmission schemes Detailed information theoretic analysis of multiple access broadcast and interference channels In depth presentation of multi user diversity resource allocation and non linear MU MIMO precoding techniques with perfect and imperfect channel knowledge Extensive coverage of cooperative multi cell MIMO OFDMA networks including network resource allocation optimization coordinated scheduling beamforming and power control interference alignment joint processing massive and network MIMO Applications of MIMO and Coordinated Multi Point CoMP in LTE LTE A and WiMAX Theoretical derivations and results contrasted with practical system

level evaluations highlighting the performance of single and multi cell MIMO techniques in realistic deployments
