Can Education Better Support the Mental Health & Wellbeing of Young People? Contributions From Developmental Psychopathology & Educational Effectiveness Research James Elliot Hall, Jana Marinka Kreppner, 2019-11-27

How can education better support the mental health wellbeing of young people Research in the 1970s that addressed this question has since proven seminal to the development of two co existing fields of research that continue to offer mutually informative insights Developmental Psychopathology DP and Educational Effectiveness Research EER DP and EER share the common agenda of understanding factors that relate to individuals learning and development DP focuses on the individual learning and developing in context EER investigates the educational systems structures and processes that shape how individuals learn and develop Given the complementarity of DP and EER it is somewhat surprising that they have rarely joined forces and synthesised knowledge to develop a fuller understanding of the roles educational contexts play in the mental health and wellbeing of students This Research Topic aims to stimulate such collaboration **From West to East:**

Children and Adolescents Kai Yuan, Yanping Bao, Yue Leng, Xiaoyu Li, 2023-11-13 The coronavirus disease 2019 COVID 19 epidemic has dramatically spread throughout the world which has also caused mental health problems among the public especially vulnerable groups like children and adolescents As a traumatic event the outbreak of COVID 19 might increase the prevalence of a series of mental health problems in children and adolescents probably due to social distancing school closures as well as separation from parents and home quarantine The continuing spreading of COVID 19 infection as well as vaccine uptake strategies quarantine policies and health services during post epidemic era may also have a long lasting side effect on children and adolescents Children and adolescents are in critical periods of neurodevelopment and once they

develop mental health problems the long lasting negative influence might span across their lifetime Moreover long term multisystem sequelae including neurological and psychiatric systems of COVID 19 infection in children also compromise the development of physical and mental wellbeing in adulthood Though there have been several studies on mental health consequences and long term impact on the mental health of children and adolescents caused by COVID 19 there is still limited data and more comprehensive studies are needed on this important topic Attachment in Adulthood Mario Mikulincer, Phillip R. Shaver, 2016-04-22 Synthesizing a vast body of empirical research and organizing it around a comprehensive conceptual model this book is recognized as the definitive reference on adult attachment The authors explain how what began as a theory of child development is now used to conceptualize and study nearly all aspects of social functioning across the lifespan including mental representations of self and others emotion regulation personal goals and strivings couple relationships caregiving sexuality psychopathology psychotherapy and organizational behavior The origins and measurement of individual differences in adult attachment are examined as is the question of whether and how attachment patterns can change New to This Edition Reflects major advances including hundreds of new studies Clarifies and extends the authors influential model of attachment system functioning Cutting edge content on genetics and on the neural and hormonal substrates of attachment Increased attention to the interplay among attachment and other behavioral systems such as caregiving and sexuality Expanded discussion of attachment processes in counseling and psychotherapy Additional coverage of leadership group dynamics and religion **The Oxford Handbook of Positive Psychology and Disability** Michael L.
