**Beyond Nature and Nurture** Javier Pérez-Jara, Íñigo Ongay, 2025-05-28 This book gathers several of the world s leading scholars in the nature vs nurture debate offering a timely reconsideration of the dynamic interactions between physical chemical biological social and cultural factors that shape human multidimensionality Emphasizing this multidimensionality this edited volume seeks to bridge the divide between biology and social theory two research communities that have too often overlooked each other These disciplines despite being central to understanding human nature have long operated in isolation While some animal species exhibit higher degrees of phenotypic plasticity in specific traits humans stand out as the most plastic species in both their neurological and sociocultural systems This plasticity leads the contributors of this book to move beyond both biological reductionism and the blank slate hypothesis While biology undoubtedly plays a role in shaping and stabilizing human social and cultural processes it does so only within the framework of an inherently social environment one shaped by historically contingent and socially constructed realities such as values codes and cultural perceptions More importantly cultural structures and social interactions actively shape and transform certain biological features that were

once considered immutable This book lays the groundwork for a productive dialogue among biologists psychologists social theorists and philosophers It also highlights some of the moral and political consequences of different perspectives within the nature vs nurture debate Through updated scientific and philosophical theorizing the chapters in this book aim to overcome once and for all the simplistic yet persistent opposition between nature and nurture offering a far more complex and dynamic yet richer and epistemologically manageable picture of the human being

Schulz, 2022-11-01 An argument that representational decision making is more cognitively efficient allowing an organism to adjust more easily to changes in the environment Many organisms including humans make decisions by relying on mental representations Not simply a reaction triggered by perception representational decision making employs high level non perceptual mental states with content to manage interactions with the environment A person making a decision based on mental representations for example takes a step back

from her perceptions at the time to assess the nature of the world she lives in But why would organisms rely on representational decision making and what evolutionary benefits does this reliance provide to the decision maker In *Efficient Cognition* Armin Schulz argues that representational decision making can be more cognitively efficient than non representational decision making Specifically he shows that a key driver in the evolution of representational decision making is that mental representations can enable an organism to save cognitive resources and adjust more efficiently to changed environments After laying out the foundations of his argument clarifying the central questions the characterization of representational decision making and the relevance of an evidential form of evolutionary psychology Schulz presents his account of the evolution of representational decision making and critically considers some of the existing accounts of the subject He then applies his account to three open questions concerning the nature of representational decision making the extendedness of decision making and when we should expect cognition to extend into the environment the specialization of decision making and the use of simple heuristics and the psychological sources of altruistic behaviors
