The Invasion Of The Computer Culture:

The Invasion of the Computer Culture Allen Emerson, Cheryl Forbes, 1990 Digital Contagions Jussi Parikka, 2007

Digital Contagions is the first book to offer a comprehensive and critical analysis of the culture and history of the computer virus phenomenon. The book maps the anomalies of network culture from the angles of security concerns, the biopolitics of digital systems, and the aspirations for artificial life in software. The genealogy of network culture is approached from the standpoint of accidents that are endemic to the digital media ecology. Viruses, worms, and other software objects are not then seen merely from the perspective of anti-virus research or practical security concerns but as cultural and historical expressions that traverse a non-linear field from fiction to technical media, from net art to politics of software. Jussi Parikka mobilizes an extensive array of source materials and intertwines them with an inventive new materialist cultural analysis. Digital Contagions draws from the cultural theories of Gilles Deleuze and Félix Guattari, Friedrich Kittler, and Paul Virilio among others and offers novel insights into historical media analysis.

INTRODUCTION

The role of a Preface is to introduce the nature of the publication. The book that emerges from an IFIP Technical Committee World Conference on Computers in Education is complex, and this complexity lies in the nature of the event from which it emerges. Unlike a number of other major international conferences, those organized within the IFIP education community are active events. A WCCE is unique among major international conferences for the structure that deliberately ensures that all attendees are active participants in the development of the debate. In addition to the major paper presentations and discussion from international authors, there are panel sessions and professional working groups who debate particular themes throughout the event. There is no doubt that this was not a dry academic conference; teachers, lecturers, and experts, policy makers and researchers, learners and manufacturers mingled and worked together to explore, reflect, discuss, and plan for the future. The added value of this event was that we know that it will have an impact on future practice; networks will be formed, both virtual and real; ideas will change, and new ones will emerge. Capturing the essence of this event is a challenge. This post-conference book has three parts. The first is the substantial number of theme papers.
