The Japanese Bond Markets Frank J. Fabozzi, 1990

Finance, Governance, and Competitiveness in Japan

Masahiko Aoki, Gary R. Saxonhouse, 2000 For much of the past half century Japan's economic success has stimulated the interest of scholars from around the world In the last decade and particularly in the last two years however it is Japan's economic difficulties which have attracted the most attention The very institutions whose efficacy was earlier praised are now often criticised as being the core of Japan's economic problems This volume brings together the research of many of the world's leading specialists on the Japanese economy to assess how Japan's distinctive economic institutions have operated in the past and how their evolution in the face of changing domestic and international circumstance's will shape the prospects for the Japanese economy in the 21st century Particular attention is paid to the evolution of Japan's financial system and the changing character of Japanese firm governance and to the changing role that government and the legal system play in Japan's economy The authors find among many other important conclusions that far reaching regulatory reform will be needed so that a new rules based system allowing greater scope for dispersed private initiative can emerge to restructure and regrow the Japanese economy

Financial Intermediation and Deregulation Tobias Miarka,2012-12-06 The author develops a model of bank firm relationships on the basis of the following general idea Banks want to prevent moral hazard on the side of their customers In particular they want to prevent their business customers to use bank credit for purposes different from those that have been negotiated thus damaging the bank s interest The idea of this model is relatively simple Banks do not extend a loan if the project for which the money is intended will probably be un profitable They extend the loan if the success of the project is highly probable and if the revenues from that project are greater than the expenses of the bank for monitoring the customer Assuming as Miarka does that the results from a successful project are certain this model is an equivalent to minimizing monitoring costs In fact this is the outcome of the model The banks are known to monitor their loans They thereby signal to the capital market that they have tested the project Therefore the buyer of bonds of the company on the capital market may rest assured that the project is financially sound The buyers of bonds thus avoid monitoring costs and can grant better credit conditions than the banks Purchasers of bonds are free riders on the monitoring of the banks Miarka tests his model econometrically The results are amazingly supportive of the model
