Abramson, 2011-08-24 A simple and systematic guide to the planning and performance of investigations concerned with health and disease and with health care. Offers researchers help in choosing a topic and to think about shaping objectives and ideas and to link these with the appropriate choice of method. Fully updated with new sections on the use of the Web and computer programmes freely available in the planning performance or analysis of studies Occupational Health Practice H A Waldron, 2013-10-22 Occupational Health Practice Third Edition is a comprehensive account of the practice of protecting and improving health in the workplace. Topics covered by this book include pre-placement screening principles of toxicology the mental health of people at work and thermal stresses in occupations. The principles of occupational epidemiology sickness absence toxicity testing of industrial chemicals ergonomics and the use of protective clothing in the workplace are also discussed. This book is comprised of 28 chapters and begins by outlining developments in occupational health practice along with the monitoring of occupational diseases. The chapters that follow explore the mental health of people at work and the health effects of vibration noise and ionizing radiation in the workplace. The text also considers emergency medical treatment in the workplace vocational rehabilitation and resettlement of people with disabilities occupational health services for migrant workers and special problems in occupational health in developing countries. The final chapter describes health promotion and counseling in the workplace. Suggestions as to how the occupational health professional should deal with perturbations in the health of the worker and workplace are included. This monograph will be of value to occupational health practitioners **EBOOK: Change-Promoting Research For Health Services** A St Leger, J Walsworth-Bell, 1999-12-16

Health services globally are changing strategically structurally and clinically. Research and Development (R D) plays a key role because only good research can elucidate and challenge the status quo or future possibilities for effective health care. Researchers and managers have a duty to collaborate with clinicians to understand and make the most of each others skills. This necessitates a new paradigm of health service research which is part of a change management culture and change promotion. A clear philosophical and practical distinction is required between R D and fundamental biomedical science. This book has been written for people who make decisions and bring about change at all sorts of levels and in a wide range of disciplines. They include clinicians in many specialities as well as administrative staff and general managers of healthcare organizations. It is also for people doing or wanting to do research and development in this fascinating area Participatory Development in Appalachia Susan Emley Keefe, 2009 Often thought of as impoverished backward and victimized the people of the southern mountains have long been prime candidates for development projects conceptualized and controlled from

outside the region This book breaking with old stereotypes and the strategies they spawned proposes an alternative paradigm for development projects in Appalachian communities one that is far more inclusive and democratic than previous models Emerging from a critical analysis of the modern development process the participatory development approach advocated in this book assumes that local culture has value that local communities have assets and that local people have the capacity to envision and provide leadership for their own social change It thus promotes better decision making in Appalachian communities through public participation and civic engagement Filling a void in current research by detailing useful hands on tools and methods employed in a variety of contexts and settings the book combines relevant case studies of successful participatory projects with practical recommendations from seasoned professionals Editor Susan E Keefe has included the perspectives of anthropologists sociologists and others who have been engaged sometimes for decades in Appalachian communities These contributors offer hopeful new strategies for dealing with Appalachia s most enduring problems strategies that will also aid activists and researchers working in other distressed or underserved communities Susan E Keefe is professor of anthropology at Appalachian State University She is the editor of Appalachian Mental Health and Appalachian Cultural Competency A Guide for Medical Mental Health and Social Service Professionals

Mental Health in the Elderly H. Häfner, G. Moschel, N. Sartorius, 2012-12-06 H Häfner G Moschel N Sartorius The size of the world s population aged over 65 was estimated at about 250 million in 1980 by the year 2025 it is expected to grow to about 760 million see Hauser this volume This sharp

increase in life expectancy at birth in some countries amounting to almost 100% in only a hundred years has resulted from better nutrition and improved living conditions hygiene and medical care Not only life expectancy at birth but also further life expectancy in advanced age has shown a clear though more moderate increase This increased life expectancy together with a simultaneous fall in birth rates has caused the mean age of the world population and especially the average age of the population of industrial nations to climb substantially in recent times a development which will reach its peak only some decades from now For these demographic reasons alone health care authorities will have to devote more attention to the health problems of the elderly The main task of medical research is to develop improved methods of disease prevention and treatment Yet because the full benefits of such research are only realized after many years of work researchers have already begun to respond to demographic pressures by focussing part of their efforts on the study of illnesses characteristic of old age
