The Arithmetic and Geometry of Algebraic Cycles B. Brent Gordon, James D. Lewis, Stefan Müller-Stach, Shuji Saito, Noriko Yui, 2012-12-06 The NATO Advanced Study Institute on The Arithmetic and Geometry of Algebraic Cycles was held at the Banff Centre for Conferences in Banff Alberta Canada from June 7 until June 19 1998 This meeting was organized jointly with Centre de Recherches Mathématiques CRM Montreal as one of the CRM Summer schools which take place annually at the Banff Center The conference also served as the kick off activity of the CRM 1998 99 theme year on Number Theory and Arithmetic Geometry There were 109 participants who came from 17 countries Belgium Canada China France Germany Greece India Italy Japan Mexico Netherlands Russia Spain Switzerland the United Kingdom and the United States During a period of two weeks 41 invited lectures and 20 contributed lectures were presented Four lectures by invited speakers were delivered every day followed by two sessions of contributed talks Many informal discussions and working

sessions involving small groups were organized by individual participants. In addition, participants' reprints and preprints were displayed throughout in a lounge next to the auditorium which further enhanced opportunities for communication and interaction.

Algebraic Cycles and Hodge Theory Mark L. Green, Jacob P. Murre, Claire Voisin, 2004-09-02 The main goal of the CIME Summer School on Algebraic Cycles and Hodge Theory has been to gather the most active mathematicians in this area to make the point on the present state of the art. Thus the papers included in the proceedings are surveys and notes on the most important topics of this area of research. They include infinitesimal methods in Hodge theory, algebraic cycles and algebraic aspects of cohomology and K-theory, transcendental methods in the study of algebraic cycles.

Algebraic Geometry Mauro C. Beltrametti, Fabrizio Catanese, Ciro Ciliberto, Antonio Lanteri, Claudio Pedrini, 2008-08-22 The volume consists of invited refereed research papers. The contributions cover a wide spectrum in algebraic geometry from motives theory to numerical algebraic geometry and are mainly focused on higher dimensional varieties and Minimal Model Program and surfaces of general type. A part of the articles grew out of a Conference in memory of Paolo Francia 1951-2000 held in Genova in September 2001 with about 70 participants.

Complex Geometry Daniel Huybrechts, 2005 Easily accessible. Includes recent developments. Assumes very little knowledge of differentiable manifolds and functional analysis. Particular emphasis on topics related to mirror symmetry, SUSY, Kaehler-Einstein metrics, Tian-Todorov lemma.

The Regulators of Beilinson and Borel José Ignacio Burgos Gil, 2002 This book contains a complete proof of the fact that Borel's regulator map is twice Beilinson's regulator map. The strategy of the proof follows the argument sketched in Beilinson's original paper and relies on very similar descriptions of the Chern-Weil morphisms and the van Est isomorphism. The book has two different parts. The first one reviews the material from algebraic topology and Lie group theory needed for the comparison theorem. Topics such as simplicial objects, Hopf algebras, characteristic classes, the Weil algebra, Bott's Periodicity theorem, Lie algebra cohomology, continuous group cohomology and the van Est Theorem are discussed. The second part contains the comparison theorem and the specific material needed in its proof such as explicit descriptions of the Chern-Weil morphism and the van Est isomorphisms, a discussion about small cosimplicial algebras and a comparison of different definitions of Borel's regulator.

Arithmetic and Geometry of K3 Surfaces and Calabi-Yau Threefolds Radu Laza, Matthias Schütt, Noriko Yui, 2013-06-12 In recent years research in K3 surfaces and Calabi-Yau varieties has seen spectacular progress from both arithmetic and geometric points of view which in turn continues to have a huge influence and impact in theoretical physics in particular in string theory. The workshop on Arithmetic and Geometry of K3 surfaces and Calabi-Yau threefolds held at the Fields Institute August 16-25 2011 aimed to give a state of the art survey of these new developments. This proceedings volume includes a representative sampling of the broad range of topics covered by the workshop. While the subjects range from arithmetic geometry through algebraic geometry and differential geometry to mathematical physics the papers are naturally related by the common theme of Calabi-Yau varieties. With the big variety of branches of mathematics and

mathematical physics touched upon this area reveals many deep connections between subjects previously considered unrelated Unlike most other conferences the 2011 Calabi Yau workshop started with 3 days of introductory lectures A selection of 4 of these lectures is included in this volume These lectures can be used as a starting point for the graduate students and other junior researchers or as a guide to the subject

Hodge Theory, Complex Geometry, and Representation Theory Robert S. Doran, Greg Friedman, Scott Nollet, 2014 This volume contains the proceedings of an NSF Conference Board of the Mathematical Sciences CBMS regional conference on Hodge theory complex geometry and representation theory held on June 18 2012 at the Texas Christian University in Fort Worth TX Phillip Griffiths of the Institute for Advanced Study gave 10 lectures describing now classical work concerning how the structure of Shimura varieties as quotients of Mumford Tate domains by arithmetic groups had been used to understand the relationship between Galois representations and automorphic forms He then discussed recent breakthroughs of Carayol that provide the possibility of extending these results beyond the classical case His lectures will appear as an independent volume in the CBMS series published by the AMS This volume which is dedicated to Phillip Griffiths contains carefully written expository and research articles Expository papers include discussions of Noether Lefschetz theory algebraicity of Hodge loci and the representation theory of SL_2 $\mathbb{R}$ Research articles concern the Hodge conjecture Harish Chandra modules mirror symmetry Hodge representations of $\mathbb{Q}$ algebraic groups and compactifications distributions and quotients of period domains It is expected that the book will be of interest primarily to research mathematicians physicists and upper level graduate students
