Sustainable Development Of The Gangesbrahmaputrameghna Basins:

Sustainable Development of the Ganges-Brahmaputra-Meghna Basins Asit K. Biswas, Juha I. Uitto, 2001 The Ganges Brahmaputra Meghna basin contains the largest number of the world's poor in any one region. The population is increasing steadily and unless the current development trends are broken poverty will become even more pervasive. The region is endowed with considerable natural resources that could be used to foster sustainable economic development. Water could be successfully used as the engine to promote economic development of the region which has been hindered because the most populous part of the basin is shared by three countries: Bangladesh, India, and Nepal, who have in the past been unable to agree to an integrated development plan. In *Sustainable Development of the Ganges Brahmaputra Meghna Basins*, leading technocrats and intellectuals discuss how, through cooperation between the countries concerned and by taking a holistic development approach, the quality of life of the people of the basin could be improved significantly within a reasonable timeframe.

Management of Transboundary Rivers and Lakes Olli Varis, Cecilia Tortajada, Asit K. Biswas, 2008-03-15 Transboundary rivers and lakes are often the remaining new sources of water that can be developed for human uses. These water sources were not used in the past because of the many complexities involved. Written and edited by the world's leading water and legal experts, this unique and authoritative book analyses the magnitudes of the transboundary water problems in different parts of the world. It also examines difficulties and constraints faced to resolve these problems.

Ganges-Brahmaputra-Meghna Region Qazi Kholiquzzaman Ahmad, 2001 This book makes a strong plea for an integrated holistic approach to the development of the region, beginning with water resources. The abundance of water in the Gbm Ganga Brahmaputra Meghna region as a shared resource can serve as the principal agent of development for the millions of people living in the region.

The basin is characterized by a high degree of heterogeneity from climatic, hydrological, geomorphological, cultural, environmental, and

socio economic perspectives More than 500 million people are directly or indirectly dependent upon the Ganges River Basin which spans China Nepal India and Bangladesh While there are many books covering one aspect of the Ganges ranging from hydrology to cultural significance this book is unique in presenting a comprehensive inter disciplinary overview of the key issues and challenges facing the region Contributors from the three main riparian nations assess the status and trends of water resources including the Himalayas groundwater pollution floods drought and climate change They describe livelihood systems in the basin and the social economic geopolitical and institutional constraints including transboundary disputes to achieving productive sustainable and equitable water access Management of the main water use sectors and their inter linkages are reviewed as well as the sustainability and trade offs in conservation of natural systems and resource development such as for hydropower or agriculture Water and Urban Development Paradigms Jan Feyen,Kelly
