Sustainable Fossil Fuels Mark Kenneth Jaccard, 2005 More and more people believe we must quickly wean ourselves from oil natural gas and coal to save the planet from wars environmental catastrophe and economic collapse Jaccard controversially argues that fossil fuels will play a key role in our quest for a sustainable energy system

Sustainable Fossil Fuels Mark Jaccard, 2006-01-16 More and more people believe we must quickly wean ourselves from fossil fuels oil natural gas and coal to save the planet from environmental catastrophe wars and economic collapse In this 2006 book Professor Jaccard argues that this view is misguided We have the technological capability to use fossil fuels without emitting climate threatening greenhouse gases or other pollutants The transition from conventional oil and gas to their unconventional sources including coal for producing electricity hydrogen and cleaner burning fuels will decrease energy dependence on politically unstable regions In addition our vast fossil fuel resources will be the cheapest source of clean energy for the next century and perhaps longer which is critical for the economic and social development of the world's poorer countries By buying time for increasing energy efficiency developing renewable energy technologies and making nuclear power more attractive fossil fuels will play a key role in humanity's quest for a sustainable energy system

Urban Energy Systems James Keirstead, Nilay Shah, 2013 This book analyses the technical and social systems that satisfy these needs and asks how methods can be put into practice to achieve this

Modeling the Economics of Greenhouse Gas Mitigation National Research Council, Division on Engineering and Physical Sciences, 2011-02-24 Models are fundamental for estimating the possible costs and effectiveness of different policies for reducing greenhouse gas (GHG) emissions There is a wide array of models to perform such analysis differing in the level of technological detail treatment of technological progress spatial and sector details and representation of the interaction of the energy sector to the overall economy and environment These differences impact model results including cost estimates More fundamentally these models differ as to how they represent fundamental processes that have a large impact on policy analysis such as how different models represent technological learning and cost reductions that come through increasing production volumes or how different models represent baseline conditions Reliable estimates of the costs and potential impacts on the United States economy of various emissions reduction and other mitigation strategies are critical to the development of the federal climate change research and development portfolio At the request of the U S Department of Energy DOE the National Academies organized a workshop summarized in this volume to consider some of these types of modeling issues

Transforming Power Dietrich Keeschull, 2017-09-08 In 1934 Lewis Mumford critiqued the industrial energy system as a key source of authoritarian economic and political tendencies in modern life Recent debate continues to engage issues of energy authoritarianism focusing on the contest between energy driven globalization the spread of energy deregulation and the

simultaneous consolidation of the oil coal and gas industries and the so called sustainable energy strategy that celebrates the local and community scale characteristics of renewable energy Including theoretical inquiries and case studies by distinguished writers Transforming Power is divided into three parts Energy Environment and Society The Politics of Conventional Energy and The Politics of Sustainable Energy It interrogates current contemporary energy assumptions exploring the reflexive relationship between energy environment and society and examining energy as a social project Some of these have promised a prosperous future founded upon technological advances that further modernize the modern energy system such as inherently safe nuclear power environmentally friendly coal gasification and the advent of a wealthier cleaner world powered by fuel cells and the green technologies said by advocates to prefigure a revival of human scale development local self determination and a commitment to ecological balance br This volume offers a timely engagement of the social issues surrounding energy conflicts and contradictions It will be of interest to policymakers energy and environmental experts sociologists and historians of technology

Catalysis for Renewables Gabriele Centi, Rutger A. van Santen, 2008-01-08 With its focus on catalysis and addressing two very hot and timely topics with significant implications for our future lives this will be a white book in the field The authority behind this practical work is the IDECAT Network of Excellence and the authors here outline how the use of catalysis will promote the more extensive use of renewable feedstocks in chemical and energy production They present the latest applications their applicability and results making this a ready reference for researchers and engineers working in catalysis chemistry and industrial processes wishing to analyze options outlooks and opportunities in the field

Biofuels in Circular Economy Suhaib A. Bandh, Fayaz A. Malla, 2023-01-01 This book provides a detailed coverage of how the circular economy aims to change the paradigm in relation to the linear economy by limiting the environmental impact and waste of resources as well as increasing efficiency at all stages of the product economy. It serves as the sole comprehensive overview of the role of biofuels in the circular economy. It contains updated information on the latest trends of techno-economic analysis of biofuels, economic transitions, low carbon economies, green circular societies, and life cycle assessment of biofuels. This book delves deep into the economic security of the poor as well as the nexus between biofuel industry and global trade bodies, making it one of the few introductory books without bias toward the contribution of biofuels in circular economy. With its diverse contributions on themes such as biofuels as potential alternatives to fossil fuels, biofuel economics and policies, biofuel standards, blending, and future insecurities, economic transitions from biomass to biofuels, and biofuel economy development and food security, the book would be a great resource for a wide and multi-disciplinary readership base ranging from researchers to academics, policy makers, innovators, corporates, and non-profit organizations working in this area.

Global Energy Dilemmas Mike Bradshaw, 2013-11-20 Today's global energy system faces two major challenges: how to secure the supply of reliable and affordable energy and how to rapidly transform to a low carbon, efficient, and environmentally harmless energy supply. In this rigorous and illuminating book, Michael Bradshaw explores the key aspects of the current global energy dilemma and examines how it is playing out across the major regions and countries of the world. The book begins by charting the development of the current global energy system, exploring its key characteristics with a focus upon energy security and the relationship between energy, economic development, and climate change. The next four chapters offer in-depth analyses of four distinct global energy dilemmas in different parts of the world: the challenge of sustaining affluence and decarbonising energy services in the high energy economies of the developed world; the legacies of the centrally planned economy and the consequences of liberalisation in the post-socialist world; growing energy demand and emissions growth associated with the emerging regions; and finally, the quest to provide universal access to modern energy services in the developing world in a manner that is both economically and environmentally sustainable. Identifying the governance structures and policy options available to tackle the global energy dilemma, the book concludes that only an integrated approach sensitive to regional issues can reconcile the interests and needs of those facing differing energy challenges across the world today.
