Ozkan, Stanislaw Mitura, Juana L. Gervasoni, 2016-04-26 Graphene is the strongest material ever studied and can be an efficient substitute for silicon This six volume handbook focuses on fabrication methods nanostructure and atomic arrangement electrical and optical properties mechanical and chemical properties size dependent properties and applications and industrialization There is no other major reference work of this scope on the topic of graphene which is one of the most researched materials of the twenty first century The set includes contributions from top researchers in the field and a foreword written by two Nobel laureates in physics

**Handbook on the Physics and Chemistry of Rare Earths** K.A. Gschneidner, L. Eyring, M.B. Maple, 2000-12-15 This volume of the Handbook is the first of a two volume set of reviews devoted to the rare earth based high temperature oxide superconductors commonly known as hiTC superconductors The history of hiTC superconductors is a few months short of being 14 years old when Bednorz and Müller published their results which showed that  $\text{LaBa}_2\text{CuO}_4$  had a superconducting transition of 30 K which was about 7K higher than any other known superconducting material Within a year the upper temperature limit was raised to nearly 100K with the discovery of a 90K superconducting transition in  $\text{YBa}_2\text{Cu}_3\text{O}_7$  The announcement of a superconductor with a transition temperature higher than the boiling point of liquid nitrogen set off a frenzy of research on trying to find other oxide hiTC superconductors Within a few months the maximum superconducting transition reached 110 K  $\text{Bi}_2\text{Sr}_2\text{Ca}_2\text{Cu}_3\text{O}_{10}$  and then 122K  $\text{TlBa}_2\text{Ca}_3\text{Cu}_4\text{O}_{11}$  It took several years to push TC up another 11 K to 133 K with the discovery of superconductivity in  $\text{HgBa}_2\text{Ca}_2\text{Cu}_3\text{O}_8$  which is still the record holder today      Methods for Phase Diagram Determination Ji-Cheng Zhao, 2011-05-05 Phase diagrams are maps materials scientists often use to design new materials They define what compounds and solutions are formed and their respective compositions and amounts when several elements are mixed together under a certain temperature and pressure This monograph is the most comprehensive reference book on experimental methods for phase diagram determination It covers a wide range of methods that have been used to determine phase diagrams of metals ceramics slags and hydrides Extensive discussion on methodologies of experimental measurements and data assessments Written by experts around the world covering both traditional and combinatorial methodologies A must read for experimental measurements of phase diagrams      **Phase Equilibria Diagrams of High Temperature Non-oxide Ceramics** Zhenkun Huang, Laner Wu, 2018-06-07 This book explores new experimental phase diagrams of non oxide ceramics with a particular focus on the silicon nitride silicon carbide and aluminum nitride as well as the ultra high temperature ceramic UHTC systems It features more than 80 experimental phase diagrams of these non oxide ceramics including three phase diagrams of UHTC systems constructed by the authors Physical chemistry data covering the period since the 1970s collected by the author Z K Huang is presented in six tables in the

appendixes It also includes 301 figures involving about 150 material systems Most of the phase diagrams have been selected from the ACerS NIST database with copyright permission The book methodically presents numerous diagrams previously scattered in various journals and conferences worldwide Providing extensive experimental data it is a valuable reference resource on ceramics development and design for academic researchers R D engineers and graduate students Handbook of Ternary Alloy Phase Diagrams: Gd-Ge-Zr Pierre Villars,1995
