The Brain in Context Jonathan D. Moreno, Jay Schulkin, 2019-11-26 The human brain is the most complex object in the known universe The field of neuroscience has made remarkable strides in recent years in understanding aspects of the brain yet we still struggle with seemingly fundamental questions about how the brain works What lessons can we learn from neuroscience's successes and failures What kinds of questions can neuroscience answer and what will remain out of reach In *The Brain in Context* the bioethicist Jonathan D. Moreno and the neuroscientist Jay Schulkin provide an accessible and thought provoking account of the evolution of neuroscience and the neuroscience of evolution They emphasize that the brain is not an isolated organ it extends into every part of the body and every aspect of human life Understanding the brain requires studying the environmental biological chemical genetic and social factors that continue to shape it Moreno and Schulkin describe today's transformative devices theories and methods including technologies like fMRI and optogenetics as well as massive whole brain activity maps and the attempt to create a digital simulation of the brain They show how theorizing about the brain and experimenting with it often go hand in hand and they raise cautions about unintended consequences of technological interventions *The Brain in Context* is a stimulating and even handed assessment of the scope and limits of what we know about how we think

A Perspective on Opioid Addiction Jay Schulkin, Bryce Huebner, 2025-09-30 Today the opioid crisis often feels intractable This book offers a wider perspective on its underlying causes examining the biological psychological and social aspects of addiction and the interactions among them Jay Schulkin a behavioral neuroscientist and Bryce Huebner a philosopher explore the complexities of opioid addiction through a distinctive combination of neuroscientific knowledge and pragmatist thought They detail the biological and neurological processes that shape and sustain addiction showing why opiates power to ease pain makes us vulnerable to abusing them The book discusses the relationship between addiction and depression the dilemmas of pain management and the meaning of recovery Schulkin and Huebner underscore the stigma that marginalizes people who struggle with addiction and the social factors that shape access to treatment and care calling for a focus on harm reduction They consider questions of individual and social accountability reflecting on choice autonomy and freedom Interdisciplinary and wide ranging this book brings deep learning empathy and insight to understanding the experience of addiction

Meaningful Information Anthony Reading, 2011-06-16 The book introduces a radically new way of thinking about information and the important role it

plays in living systems It opens up new avenues for exploring how cells and organisms change and adapt since the ability to detect and respond to meaningful information is the key that enables them to receive their genetic heritage regulate their internal milieu and respond to changes in their environment It also provides a way of resolving Descartes dilemma by explaining the workings of the brain in non mechanical terms that are not tainted by spiritual or metaphysical beliefs The types of meaningful information that different species and different cell types are able to detect are finely matched to the ecosystem in which they live for natural selection has shaped what they need to know to function effectively in those circumstances Biological detection and response systems range from the chemical configurations that govern genes and cell life to the relatively simple tropisms that guide single cell organisms the rudimentary nervous systems of invertebrates and the complex neuronal structures of mammals and primates The scope of meaningful information that can be detected and responded to reaches its peak in our own species as exemplified by our special abilities in language cognition emotion and consciousness all of which are explored within this new framework

Trauma-Sensitive Schools Susan E. Craig,2016

Growing evidence supports the important relationship between trauma and academic failure Along with the failure of zero tolerance a new understanding of children s disruptive behaviour educators are changing the way they view children s academic and social problems In response the trauma sensitive schools movement presents a new vision for promoting children s success This book introduces this promising approach and provides K 5 education professionals with clear explanations of current research and dozens of practical creative ideas to help them view poor academic and social progress through a trauma sensitive lens create a school climate that fosters safety and resiliency in vulnerable children establish relationships with children that support their efforts to self regulate design instruction that reflects the social nature of the brain work with the brain s neuroplasticity to increase children s executive function and reduce teacher attrition in high risk schools by decreasing secondary traumatic stress Integrating research on children s neurodevelopment and educational best practices this important book will build the capacity of teachers and school administrators to successfully manage the behaviour of children with symptoms of complex developmental trauma

Humanistic Wellbeing Joar Vittersø,2025-02-12

This open access book seeks to change the way we think about happiness and the good life It starts ambitiously by exploring how the biological question What is life can be integrated with the philosophical question What is good It ends with a radical idea for how scientific reasoning can include a value based theory of the good life Anchored in basic knowledge about human nature the new humanistic theory of wellbeing suggests that a life is good to the extent that it allows us to perform our humanness well The theory further defines a well performed humanness as the fulfilment of three universal human needs the need for stability the need for change and the need to and for care To reach this standpoint the author critically examines major concepts in the wellbeing literature such as values happiness life satisfaction affect hedonia eudaimonia and the good life Based on these reviews the author argues that a science of wellbeing cannot be strictly descriptive and value free A life

should not be considered good only because it feels good or is thought of as good for the person living it A good life must also be committed to a universal morality Therefore the humanistic theory of wellbeing suggests that it is good to like one's life but even better to like it for the right reasons

Moral Motivation Through the Life Span Gustavo Carlo, Carolyn P. Edwards, 2005-01-01 Moral Motivation through the Life Span is the fifty first volume in the Nebraska Symposium on Motivation series the longest continuously running symposium in the field of psychology This work focuses on moral development theory and research an area of academic study that began early in the twentieth century but has never before been addressed by the Symposium What is morality such theorists ask and what exactly makes a moral person The contributors to this volume are of diverse theoretical orientations and take different stances on a number of major themes What motivates moral behavior Are there certain universal moral values or are such values always subjective Does an individual's will or an individual's environment play a greater role in determining moral conduct What influence can we attribute to spirituality Finally the contributors explore the practical applications of their research on moral motivation What implications do such theories have for child rearing or our educational system How do we raise the next generation to be empathetic toward their fellow human beings

Sweet Anticipation David Huron, 2008-01-25 The psychological theory of expectation that David Huron proposes in *Sweet Anticipation* grew out of the author's experimental efforts to understand how music evokes emotions These efforts evolved into a general theory of expectation that will prove informative to readers interested in cognitive science and evolutionary psychology as well as those interested in music The book describes a set of psychological mechanisms and illustrates how these mechanisms work in the case of music All examples of notated music can be heard on the Web Huron proposes that emotions evoked by expectation involve five functionally distinct response systems reaction responses which engage defensive reflexes tension responses where uncertainty leads to stress prediction responses which reward accurate prediction imagination responses which facilitate deferred gratification and appraisal responses which occur after conscious thought is engaged For real world events these five response systems typically produce a complex mixture of feelings The book identifies some of the aesthetic possibilities afforded by expectation and shows how common musical devices such as syncopation cadence meter tonality and climax exploit the psychological opportunities The theory also provides new insights into the physiological psychology of awe laughter and spine tingling chills Huron traces the psychology of expectations from the patterns of the physical cultural world through imperfectly learned heuristics used to predict that world to the phenomenal qualia we experienced as we apprehend the world
