Survival Imperative Using Space To Save Earth:

The Survival Imperative William E. Burrows, 2007-04-01 Using Space to Save Earth Veteran science journalist William E Burrows offers a bold new mission for the U S space program to protect the Earth from the ever growing number of perils that threaten our way of life and even our very survival We are living through one of the most dangerous times in human history Nuclear chemical and biological weapons technology are proliferating and missile technology is falling into more and more hands Extreme natural disasters like hurricanes floods fires and earthquakes are becoming increasingly costly not only in dollars but in lives as population expands Environmental crises threaten to provoke massive famines and widespread social collapse Asteroids the size of battleships streak within striking distance of the earth every year One strategy offers the best hope of protecting us from all of these dangers a revitalized national space program that coordinates efforts in global defense in environmental protection in communications and in military security The Survival Imperative offers an impassioned argument for this bold initiative To demonstrate the urgency of his cause Burrows presents a vivid scenario an impact by a moderately large asteroid that triggers a series of nuclear exchanges environmental devastation and the slow disintegration of civilization And he examines the existing space program from the heady days of the Moon landing through the political compromises that have characterized the history of NASA in the 35 years following our retreat from the Moon Most of all Burrows warns that the primary obstacle to achieving a true planetary defense program is not financial or scientific but social an unwillingness to acknowledge the urgency of the crisis and to take the political risks needed to address it The question says Burrows is not whether we can do it but whether we will act before it s too late At the Publisher s request this title is being sold without Digital Rights Management Software DRM applied [The Survival Imperative](#) William E. Non-use Measures for Global Goods and Commons in International Law Solène Guggisberg, Catherine Blanchard, 2025-07-31 In a world facing major environmental crises radical measures are increasingly called for As a change in paradigm from our anthropocentric approach to the environment and its resources remains mostly aspirational non use measures present themselves as practical regulatory tools to respond to environmental degradation This edited volume examines moratoria bans no take or entry zones across regimes regulating global goods and commons It analyses factors that have contributed to the successful adoption and implementation of non use measures for resources in the high seas deep seabed atmosphere and Antarctica It then presents pathways for the development and adoption of further non use measures in these areas and in outer space before reflecting on such measures limitations and potential *The Rough Guide to Genes & Cloning* Jess Buxton, Jon Turney, 2007-04-26 What exactly is a gene How does cloning actually work Are designer babies a bad idea Could we ever clone a human The Rough Guide To Genes Cloning answers all these questions and more From the inside story of cells and their structure and the sleuths who cracked the genetic code to DNA cloning twins and Dolly the

sheep Illustrated throughout with helpful pictures and diagrams this Rough Guide turns the microscope on the things that make us what we are *Aerospace America*, 2003 *Dark Skies* Daniel Deudney, 2020 *Dark Skies* provides the first comprehensive and balanced assessment of the space enterprise past present and future It demolishes widely held optimistic assumptions about the desirability of many major space activities actual and prospective Most consequentially the hiding in plain sight use of outer space as a corridor for long range bombardment has increased the probability of catastrophic nuclear war Contrary to the widespread claim that sustainable colonies on other celestial bodies are necessary for human survival from large scale disasters on Earth *Dark Skies* shows that colonization itself poses many severe threats and should be avoided Instead an Earth oriented space program should be pursued *Contributions of Space to National Imperatives* United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Science and Space, 2012 **The Ethics of Space Exploration** James S.J. Schwartz, Tony Milligan, 2016-07-25 This book aims to contribute significantly to the understanding of issues of value including the ultimate value of space related activities which repeatedly emerge in interdisciplinary discussions on space and society Although a recurring feature of discussions about space in the humanities the treatment of value questions has tended to be patchy of uneven quality and even on occasion idiosyncratic rather than drawing upon a close familiarity with state of the art ethical theory One of the volume s aims is to promote a more robust and theoretically informed approach to the ethical dimension of discussions on space and society While the contributions are written in a manner which is accessible across disciplines the book still withstands scrutiny by those whose work is primarily on ethics At the same time it allows academics across a range of disciplines an insight into current approaches toward how the work of ethics gets done The issues of value raised could be used to inform debates about regulation space law and protocols for microbial discovery as well as longer range policy debates about funding *Soviet space programs, 1976-80 (with supplementary data through 1983)*, 1984 *Harvesting Space for a Greener Earth* Greg Matloff, C Bangs, Les Johnson, 2014-04-07 What was our planet like in years past How has our civilization affected Earth and its ecology *Harvesting Space for a Greener Planet* the Second Edition of *Paradise Regained* The Regreening of the Earth begins by discussing these questions and then generates a scenario for the restoration of Earth It introduces new and innovative ideas on how we could use the Solar System and its resources for terrestrial benefit The environmental challenges that face us today cannot be resolved by conservation and current technologies alone *Harvesting Space* highlights the risk of humankind s future extinction from environmental degradation Population growth global climate change and maintaining sustainability of habitats for wildlife are all considered among other issues Rather than losing heart we need to realize that the solutions to these problems lie in being good stewards of the planet and in the development of space Not only will the solutions offered here avert a crisis they will also provide the basis for continued technological and societal progress Tapping the resources of near Earth asteroids will lead to methods of diverting those asteroids that threaten Earth Space based

terrestrial power generation systems will work synergistically with Earth based conservation This book needs to be read urgently and widely if we are to save ourselves from environmental disaster reduce the risk of catastrophic cosmic impacts and build a prosperous and sustainable future for all the creatures of Earth
